Preface

This user's guide provides information about the components, features, connectors and system resources available on the conga-HPC/cRLS. It is one of three documents that should be referred to when designing a COM-HPC® application. The other reference documents that should be used include the following:

COM-HPC® Module Base Specification

COM-HPC® Carrier Design Guide

These documents can be found on the PICMG® website at www.picmg.org

Additionally, check the restricted area of the congatec website at www.congatec.com and the website of the respective silicon vendor for relevant documents (e.g., Erratum, PCN, Sighting Reports, etc.).

Software Licenses

Notice Regarding Open Source Software

The congatec products contain Open Source software that has been released by programmers under specific licensing requirements such as the "General Public License" (GPL) Version 2 or 3, the "Lesser General Public License" (LGPL), the "ApacheLicense" or similar licenses.

You can find the specific details at <https://www.congatec.com/en/licenses/>. Search for the revision of the BIOS/UEFI or Board Controller Software (as shown in the POST screen or BIOS setup) to get the complete product related license information. To the extent that any accompanying material such as instruction manuals, handbooks etc. contain copyright notices, conditions of use or licensing requirements that contradict any applicable Open Source license, these conditions are inapplicable.

The use and distribution of any Open Source software contained in the product is exclusively governed by the respective Open Source license. The Open Source software is provided by its programmers without ANY WARRANTY, whether implied or expressed, of any fitness for a particular purpose, and the programmers DECLINE ALL LIABILITY for damages, direct or indirect, that result from the use of this software.

OEM/ CGUTL BIOS

BIOS/UEFI modified by customer via the congatec System Utility (CGUTL) is subject to the same license as the BIOS/UEFI it is based on. You can find the specific details at <https://www.congatec.com/en/licenses/>.

Disclaimer

The information contained within this user's guide, including but not limited to any product specification, is subject to change without notice.

congatec GmbH provides no warranty with regard to this user's guide or any other information contained herein and hereby expressly disclaims any implied warranties of merchantability or fitness for any particular purpose with regard to any of the foregoing. congatec GmbH assumes no liability for any damages incurred directly or indirectly from any technical or typographical errors or omissions contained herein or for discrepancies between the product and the user's guide. In no event shall congatec GmbH be liable for any incidental, consequential, special, or exemplary damages, whether based on tort, contract or otherwise, arising out of or in connection with this user's guide or any other information contained herein or the use thereof.

Intended Audience

This user's guide is intended for technically qualified personnel. It is not intended for general audiences.

RoHS Directive

All congatec GmbH designs comply with EU RoHS Directive 2011/65/EU and Delegated Directive 2015/863.

Electrostatic Sensitive Device

All congatec GmbH products are electrostatic sensitive devices. They are enclosed in static shielding bags, and shipped enclosed in secondary packaging (protective packaging). The secondary packaging does not provide electrostatic protection.

Do not remove the device from the static shielding bag or handle it, except at an electrostatic-free workstation. Also, do not ship or store electronic devices near strong electrostatic, electromagnetic, magnetic, or radioactive fields unless the device is contained within its original packaging. Be aware that failure to comply with these guidelines will void the congatec GmbH Limited Warranty.

Symbols

The following symbols are used in this user's guide:

Warning

Warnings indicate conditions that, if not observed, can cause personal injury.

Caution

Cautions warn the user about how to prevent damage to hardware or loss of data.

Note

Notes call attention to important information that should be observed.

Copyright Notice

Copyright © 2023, congatec GmbH. All rights reserved. All text, pictures and graphics are protected by copyrights. No copying is permitted without written permission from congatec GmbH.

congatec GmbH has made every attempt to ensure that the information in this document is accurate yet the information contained within is supplied "as-is".

Trademarks

Product names, logos, brands, and other trademarks featured or referred to within this user's guide, or the congatec website, are the property of their respective trademark holders. These trademark holders are not affiliated with congatec GmbH, our products, or our website.

Warranty

congatec GmbH makes no representation, warranty or guaranty, express or implied regarding the products except its standard form of limited warranty ("Limited Warranty") per the terms and conditions of the congatec entity, which the product is delivered from. These terms and conditions can be downloaded from www.congatec.com. congatec GmbH may in its sole discretion modify its Limited Warranty at any time and from time to time.

The products may include software. Use of the software is subject to the terms and conditions set out in the respective owner's license agreements, which are available at www.congatec.com and/or upon request.

Beginning on the date of shipment to its direct customer and continuing for the published warranty period, congatec GmbH represents that the products are new and warrants that each product failing to function properly under normal use, due to a defect in materials or workmanship or due to non conformance to the agreed upon specifications, will be repaired or exchanged, at congatec's option and expense.

Customer will obtain a Return Material Authorization ("RMA") number from congatec GmbH prior to returning the non conforming product freight prepaid. congatec GmbH will pay for transporting the repaired or exchanged product to the customer.

Repaired, replaced or exchanged product will be warranted for the repair warranty period in effect as of the date the repaired, exchanged or replaced product is shipped by congatec, or the remainder of the original warranty, whichever is longer. This Limited Warranty extends to congatec's direct customer only and is not assignable or transferable.

Except as set forth in writing in the Limited Warranty, congatec makes no performance representations, warranties, or guarantees, either express or implied, oral or written, with respect to the products, including without limitation any implied warranty (a) of merchantability, (b) of fitness for a particular purpose, or (c) arising from course of performance, course of dealing, or usage of trade.

congatec GmbH shall in no event be liable to the end user for collateral or consequential damages of any kind. congatec shall not otherwise be liable for loss, damage or expense directly or indirectly arising from the use of the product or from any other cause. The sole and exclusive remedy against congatec, whether a claim sound in contract, warranty, tort or any other legal theory, shall be repair or replacement of the product only.

Certification

congatec GmbH is certified to DIN EN ISO 9001 standard.

Technical Support

congatec GmbH technicians and engineers are committed to providing the best possible technical support for our customers so that our products can be easily used and implemented. We request that you first visit our website at www.congatec.com for the latest documentation, utilities and drivers, which have been made available to assist you. If you still require assistance after visiting our website then contact our technical support department by email at support@congatec.com

Terminology

Term	Description
DDI	Digital Display Interface
DTR	Dynamic Temperature Range
E-cores	Efficient-cores
eDP	Embedded DisplayPort
GB	Gigabyte
GHz	Gigahertz
HDA	High Definition Audio
kB	Kilobyte
kHz	Kilohertz
Mb	Megabit
MB	Megabyte
MHz	Megahertz
N.A	Not available
N.C	Not connected
PCH	Platform Controller Hub
PCIe	PCI Express
P-cores	Performance-cores
PEG	PCI Express Graphics
SATA	Serial ATA
TBD	To be determined
TDP	Thermal Design Power
TPM	Trusted Platform Module

1 Introduction

1.1 COM-HPC® Concept

COM-HPC® is an open standard defined specifically for high performance Computer-on-Modules (COMs) for embedded systems. The defined module types are client module with fixed input voltage, client module with variable input voltage and server module with fixed input voltage.

The COM-HPC® modules are available in the following form factors:

- Mini 95 mm x 70 mm
- Size A 95 mm x 120 mm
- Size B 120 mm x 120 mm
- Size C 160 mm x 120 mm
- Side D 160 mm x 160 mm
- Side E 200 mm x 160 mm

Table 1 COM-HPC® Interface Summary

Features	Classification	Mini Module Min/Max	Client Module Min/Max	Server Module Min/Max	Comment
Ethernet	NBASE-T	1 / 2	1 / 2	1 / 1	
	KR/KX	N.A	0 / 2	2 / 8	
	SGMII	0 / 2	N.A	N.A	
Storage	SATA	0 / 2	0 / 2	0 / 2	Pin is shared with PCIe on mini module
PCIe	Lane 0-47	1 / 16	4 / 48	8 / 48	Two PCIe reference clock output pairs required on mini module
	Lane 48-63	N.A	N.A	0 / 16	
	BMC	N.A	0 / 1	1 / 1	
USB	USB 2.0 Ports 0-7	6 / 8	4 / 8	4 / 8	Ports 0-5 (mini module) or ports 0-3 (server/client module) are used for USB 3.2 and USB4 if implemented.
	USB 3.2 Gen 1 or Gen 2	0 / 5	0 / 4	0 / 4	Requires one SuperSpeed Tx pair and one Rx pair per port
	USB 3.2 Gen 2x2	0 / 4	0 / 4	0 / 2	Requires two SuperSpeed Tx pairs and two Rx pairs per port
	USB4	0 / 4	0 / 4	0 / 2	USB4 ports use USB 3.2 Gen 2x2 ports
SPI	eSPI	0 / 1	0 / 1	0 / 1	
	Boot SPI	1 / 1	1 / 1	1 / 1	
	General Purpose SPI	1 / 1	1 / 1	1 / 1	

Features	Classification	Mini Module Min/Max	Client Module Min/Max	Server Module Min/Max	Comment
BIOS Select	-	1 / 1	1 / 1	1/1	
Display	DDI	0 / 2	1 / 3	N.A	Additional display outputs may be available on the USB4 interface. On mini module, DDI pins are shared with USB4.
	eDP	0 / 1	0 / 1	N.A	
MIPI	DSI	0 / 1	0 / 1	N.A	¹ Optional FFC connectors for MIPI-CSI on the mini module.
	CSI	N.A ¹	0 / 2	N.A	
Audio	Soundwire	0 / 2	0 / 2	N.A	I2S pins may be used for one HDA port or two additional SoundWire ports for a total of up to four SoundWire ports.
	I2S	0 / 1	0 / 1	N.A	
Other Serial Ports	I2C	2 / 3	2 / 2	2 / 2	I2C0 and I2C1 for client and server modules. The mini module supports a third I2C port (I2C2/MDIO for SGMII PHY setup).
	SMBus	1 / 1	1 / 1	1 / 1	
	IPMB	N.A	0 / 1	0 / 1	
	UART	0 / 2	0 / 2	1 / 2	
GPIO	-		12 / 12	12 / 12	
Miscellaneous	Watchdog Timer	0 / 1	0 / 1	0 / 1	
	Fan (PWM and tachometer)	1 / 1	1 / 1	1 / 1	
FuSa	FuSa set of signals	0 / 1	0 / 1	0 / 1	
Power Rails	VCC	12 / 12	28 / 28	28 / 28	
	VCC_5V-SBY	N.A	0 / 2	0 / 2	The mini module does not have 5V standby pins.
	VCC_RTC	1 / 1	1 / 1	1 / 1	
	GND	All	All	All	All available GND pins shall be used.
Connector	J1	1 / 1	1 / 1	1 / 1	
	J2	N.A	0 / 1	1 / 1	

1.2 The conga-HPC/cRLS

The conga-HPC/cRLS is a COM-HPC® client type size C module with 13th Generation Intel® processors. The conga-HPC/cRLS is equipped with two high performance connectors that ensure stable data throughput. It provides all the core functional requirements for any embedded application when mounted onto an application-specific carrier board.

1.2.1 Options Information

The conga-HPC/cRLS is currently available in eight commercial variants. The table below shows the different configurations available.

Table 2 Commercial Variants

Part-No.		049800	049801	049802	049803
Processor		Intel® Core™ i9-13900E	Intel® Core™ i7-13700E	Intel® Core™ i5-13400E	Intel® Core™ i3-13100E

2.1 Feature List

Table 3 Feature Summary

Form Factor	COM-HPC® Client Size C Client Connector Pinout	
CPUs	Intel® Core™ 13 th Gen Processors Raptor Lake-S and 14 th Gen Processors Raptor Lake-S Refresh	
Processor Socket	FCLGA 1700	
Chipset	R680E Q670E	
DRAM	4 SO-DIMM sockets for DDR5 memory modules up to 32 GByte each max. 128 GByte RAM system capacity up to 4.000 MT/s ECC Support (not supported on product variants 049803, 049812 and 049813)	
Graphics	Up to Intel® UHD Graphics 770 driven by Xe Architecture up to 32 EU	
Display	3x DDI eDP	
Ethernet	2x 2.5 GbE with TSN support via Intel® i226 Ethernet controller series	
I/O Interfaces	1x16 PCIe Gen 5 (PEG port) 3x4 PCIe Gen 4 up to 3x4 PCIe Gen 3 1x2 PCIe Gen3 4x USB 3.2 Gen2x2 (including 4x USB 2.0) + 4x USB2.0 2x SATA 2x UART 12x GPIO	
Audio	High-Definition Audio	
congatec Board controller	Multi-Stage Watchdog non-volatile User Data Storage Manufacturing and Board Information Board Statistics I²C bus (fast mode, 400 kHz, multi-master) Power Loss Control Hardware Health Monitoring POST Code redirection	
Embedded BIOS Feature	AMI Aptio® UEFI firmware 32 Mbyte serial SPI with congatec Embedded BIOS feature OEM Logo OEM CMOS default settings LCD Control Display Auto Detection Backlight Control Flash Update	
Security	Trusted Platform Module (TPM 2.0)	
Power Management	ACPI 5.0a with battery support	
Operating Systems	Microsoft® Windows 11 Microsoft® Windows 11 IoT Enterprise Microsoft® Windows 10 Microsoft® Windows 10 IoT Enterprise Linux Yocto	
Hypervisor	RTS Real-Time Hypervisor	
Temperature	Operation: 0°C to +60°C	Storage: -20°C to +80°C
Humidity	Operation: 10 to 90% r. H. non cond.	Storage: 5% to 95% r. H. non cond.
Size	120 x 160 mm	

2.2 Supported Operating Systems

The conga-HPC/cRLS supports the following operating systems:

- Microsoft® Windows 11
- Microsoft® Windows 11 IoT Enterprise
- Microsoft® Windows 10 IoT Enterprise 2021 LTSC
- Microsoft® Windows 10 Enterprise 2021 LTSC
- Linux
- Yocto
- RTS Hypervisor

Note

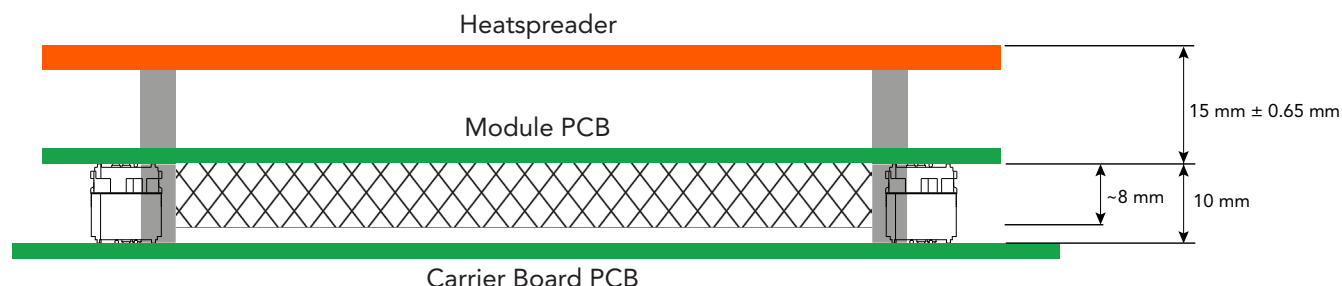

1. *The conga-HPC/cRLS supports only native UEFI Operating Systems. Legacy Operating Systems which require CSM (Compatibility Support Module) as part of the UEFI firmware are not supported anymore.*
2. *For Windows® 10 installation, we recommend a minimum storage capacity of 20 GB. congatec will not offer technical support for systems with less than 20 GB storage space.*
3. *To support Intel® i226 Ethernet controller in Linux by default, you need kernel 5.15 or higher.*

2.3 Mechanical Dimensions

The standard conga-HPC/cRLS module variants have the following dimensions:

- length of 160 mm
- width of 120 mm
- PCB thickness of 2 mm +/- 10%

The overall height of an assembly with standard conga-HPC/cRLS module variants is shown below:

Caution

The standard conga-HPC/cRLS module's bottom-side SO-DIMM connectors exceed COM-HPC® height limitations. This design allows for increased system memory capacity but requires special carrier board design considerations:

- *Implement the 10 mm COM-HPC® carrier connector height stack option.*
- *Ensure components do not collide with the module's bottom-side SO-DIMM connectors, including during assembly.*

Failure to follow these design considerations may result in damage to the carrier board and module or cause improper fit.

For a COM-HPC® compliant conga-HPC/cRLS module without bottom-side SO-DIMM connectors, contact your congatec sales representative.

2.4 Supply Voltage Standard Power

The conga-HPC/cRLS requires 12 V DC \pm 5 % input power (client module with fixed input voltage).

2.4.1 Electrical Characteristics

Power supply pins on the module's connectors limit the amount of input power. The following table provides an overview of the limitations for the conga-HPC/cRLS (client module with fixed input voltage).

Input Power - Fixed 12 V In

Power Rail	Module Pin Current Capability (Ampere)	Input Range (V)	Min. Input (V)	Max. Module Input Power at Min. Input Voltage (W)	Assumed Conversion Efficiency (%)	Max. Module Load Power at Min. Input Voltage (W)
VCC	28 * 1.12 = 31.4	12V +/- 5%	11.4	358	85	304
VCC_5V_SBY	1.12	4.75 - 5.25	4.75	5.32	100	5.3 (with one VCC_5V_SBY pin) 10.6 (with two VCC_5V_SBY pins)
VCC_RTC	1.12	2.3 - 3.3	2.3			

2.4.2 Rise Time

The input voltages shall rise from 10 percent of nominal to 90 percent of nominal within a timeframe of 0.1 ms to 20 ms. The smooth turn-on requires that, during the 10 percent to 90 percent portion of the rise time, the slope of the turn-on waveform must be positive.

2.5 Power Consumption

The power consumption values were measured with the following setup:

- conga-HPC/cRLS
- modified congatec carrier board
- conga-HPC/cRLS cooling solution
- Microsoft® Windows® 10 (64-bit)

The CPU was stressed to its maximum workload with the Intel® Power and Thermal Analysis Tool.

The power consumption values were recorded during the following system states:

Table 4 Measurement Description

System State	Description	Comment
S0: Minimum value	Lowest frequency mode (LFM) with minimum core voltage during desktop idle	
S0: Maximum value	Highest frequency mode (HFM/Turbo Boost)	The CPU was stressed to its maximum frequency
S0: Peak current	Highest current spike during the measurement of "S0: Maximum value". This state shows the peak value during runtime.	Consider this value when designing the system's power supply to ensure that sufficient power is supplied during worst case scenarios
S3	COM is powered by VCC_5V_SBY	
S5	COM is powered by VCC_5V_SBY	
S5e	COM is powered by VCC_5V_SBY	

1. The fan and SATA drives were powered externally.
2. All other peripherals except a DP monitor were disconnected before measurement.

The table below provides the power consumption values for the conga-HPC/cRLS at various system states:

Table 5 Power Consumption Values

Part No.	Memory Size	H.W Rev.	BIOS Rev.	CPU	Current (Ampere) (S0 @ 12V; S3, S5, S5e @ 5V)					
					S0: Min	S0: Max	S0: Peak	S3	S5	S5e
049800	4 x 32GB	A.1	GRLSR004	Intel® Core™ i9-13900E	1.09	10.10	21.67	0.31	0.15	0.0010
049801	4 x 32GB	A.1	GRLSR004	Intel® Core™ i7-13700E	1.12	9.82	21.76	0.29	0.15	0.0008
049802	4 x 32GB	A.1	GRLSR004	Intel® Core™ i5-13400E	1.05	9.44	13.72	0.29	0.15	0.0008
049803	4 x 32GB	A.1	GRLSR004	Intel® Core™ i3-13100E	1.37	6.78	8.90	0.30	0.15	0.0010
049810	4 x 32GB	A.1	GRLSR004	Intel® Core™ i9-14900	1.10	10.05	22.77	0.29	0.15	0.0010

Power consumption values for other variants may be available on request. For more information, contact your local sales representative.

2.6 Supply Voltage Battery Power

Table 6 CMOS Battery Power Consumption

RTC @	Voltage	Current
-10°C	3V DC	2.44 μ A
20°C	3V DC	2.80 μ A
70°C	3V DC	6.17 μ A

Note

1. Do not use the CMOS battery power consumption values listed above to calculate CMOS battery lifetime.
2. Measure the CMOS battery power consumption of your application in worst case conditions (for example, during high temperature and high battery voltage).
3. Consider the self-discharge of the battery when calculating the lifetime of the CMOS battery. For more information, refer to application note AN9_RTC_Battery_Lifetime.pdf on congatec GmbH website at www.congatec.com/support/application-notes
4. We recommend to always have a CMOS battery present when operating the conga-HPC/cRLS.

2.7 Environmental Specifications

Temperature	Operation: 0° to 60°C	Storage: -20° to +80°C
Humidity	Operation: 10% to 90%	Storage: 5% to 95%

Caution

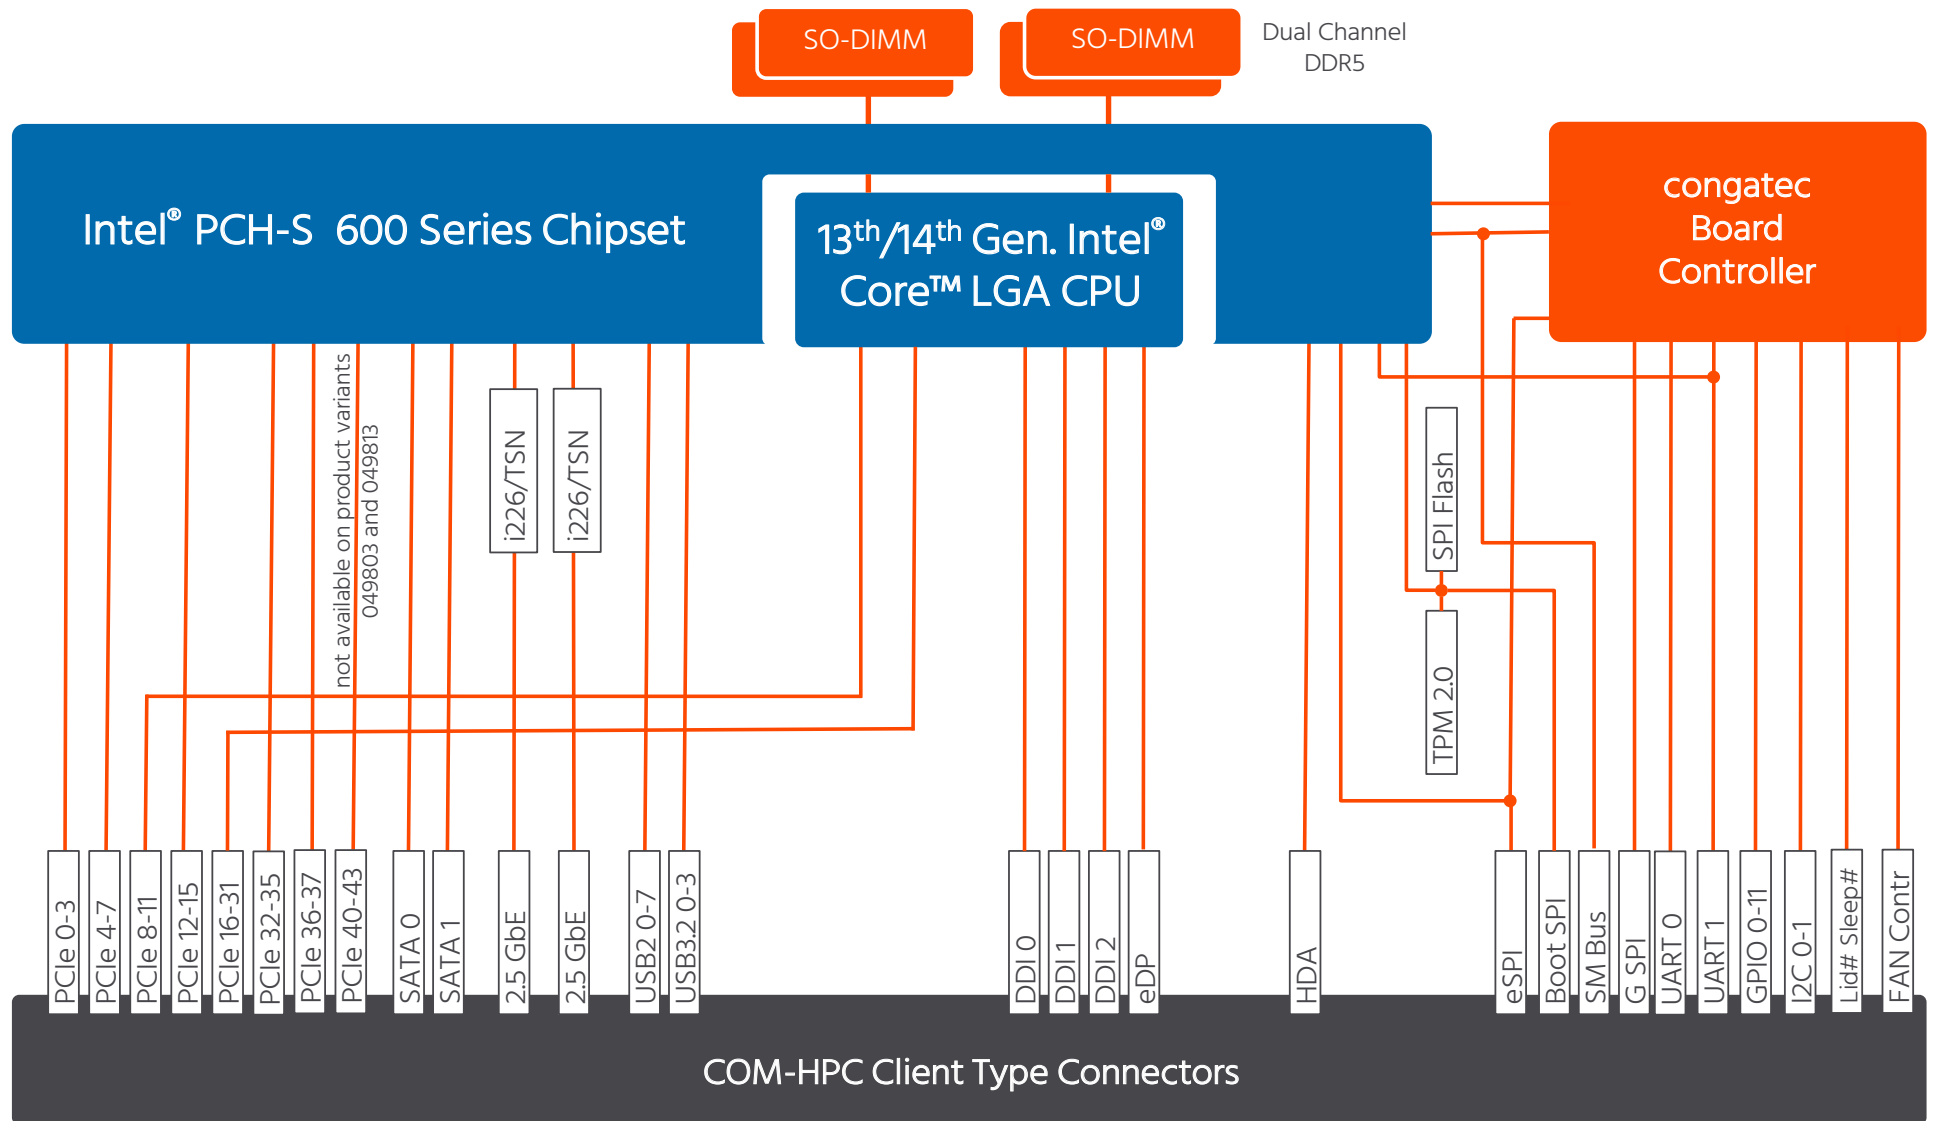

1. The above operating temperatures must be strictly adhered to at all times. When using a congatec heat spreader, the maximum operating temperature refers to any measurable spot on the heat spreader's surface.
2. Humidity specifications are for non-condensing conditions.
3. Disable Turbo mode for industrial use conditions.

Note

For long term storage of the conga-HPC/cRLS (more than six months), keep the conga-HPC/cRLS in a climate-controlled building at a constant temperature between 5°C and 40°C, with humidity of less than 65% and at an altitude of less than 3000 m. Also ensure the storage location is dry and well ventilated. We do not recommend storing the conga-HPC/cRLS for more than five years under these conditions.

3 Block Diagram

4 Cooling Solutions

congatec GmbH offers the following cooling solutions for the conga-HPC/cRLS. The dimensions of the cooling solutions are shown in the sub-sections. All measurements are in millimeters.

Table 7 Cooling Solution Variants

Cooling Solution	Part No	Description
CSA	049650	Active cooling solution with 2.7 mm bore-hole standoffs
	049651	Active cooling solution with M2.5 threaded standoffs
HSP	049652	Heatspreader with 2.7 mm bore-hole standoffs
	049653	Heatspreader with M2.5 threaded standoffs
HPA	049654	Heatpipe adapter

Caution

1. The congatec heatspreaders/cooling solutions listed above are tested only within the ambient temperature range of 0° to 55°C. Therefore, if your application that features one of the above congatec heat spreader/cooling solution operates outside this range, ensure the correct operating temperature of the module is maintained at all times. This may require additional cooling components for your final application's thermal solution.
2. The heatpipes of congatec heatspreaders/cooling solutions are filled with water by default. To ensure optimal cooling performance, they should not be stored at temperatures below -20°C. If the storage temperature drops below -10°C, the heatpipes should be pre-heated before operation. Optionally, the heatpipes can be filled with acetone instead.
3. For adequate heat dissipation, use the mounting holes on the cooling solution to attach it to the module. Apply thread-locking fluid on the screws if the cooling solution is used in a high shock and/or vibration environment. To prevent the standoff from stripping or cross-threading, use non-threaded carrier board standoffs to mount threaded cooling solutions.
4. For applications that require vertically-mounted cooling solution, use only coolers that secure the thermal stacks with fixing post. Without the fixing post feature, the thermal stacks may move.
5. Do not exceed the recommended maximum torque. Doing so may damage the module or the carrier board, or both.

Note

1. We recommend a maximum torque of 0.4 Nm for carrier board mounting screws and 0.5 Nm for module mounting screws.

-
2. *The gap pad material used on congatec heat spreaders may contain silicon oil that can seep out over time depending on the environmental conditions it is subjected to. For more information about this subject, contact your local congatec sales representative and request the gap pad material manufacturer's specification.*
 3. *For optimal thermal dissipation, do not store the congatec cooling solutions for more than six months.*

4.1 CSA Dimensions

- M2.5 x 11 mm threaded standoff for threaded version or $\varnothing 2.7 \times 11$ mm non-threaded standoff for borehole version

HEAT SINK DESIGN
1 : 1

4.2 HSP Dimensions

- M2.5 x 11 mm threaded standoff for threaded version or $\varnothing 2.7 \times 11$ mm non-threaded standoff for borehole version

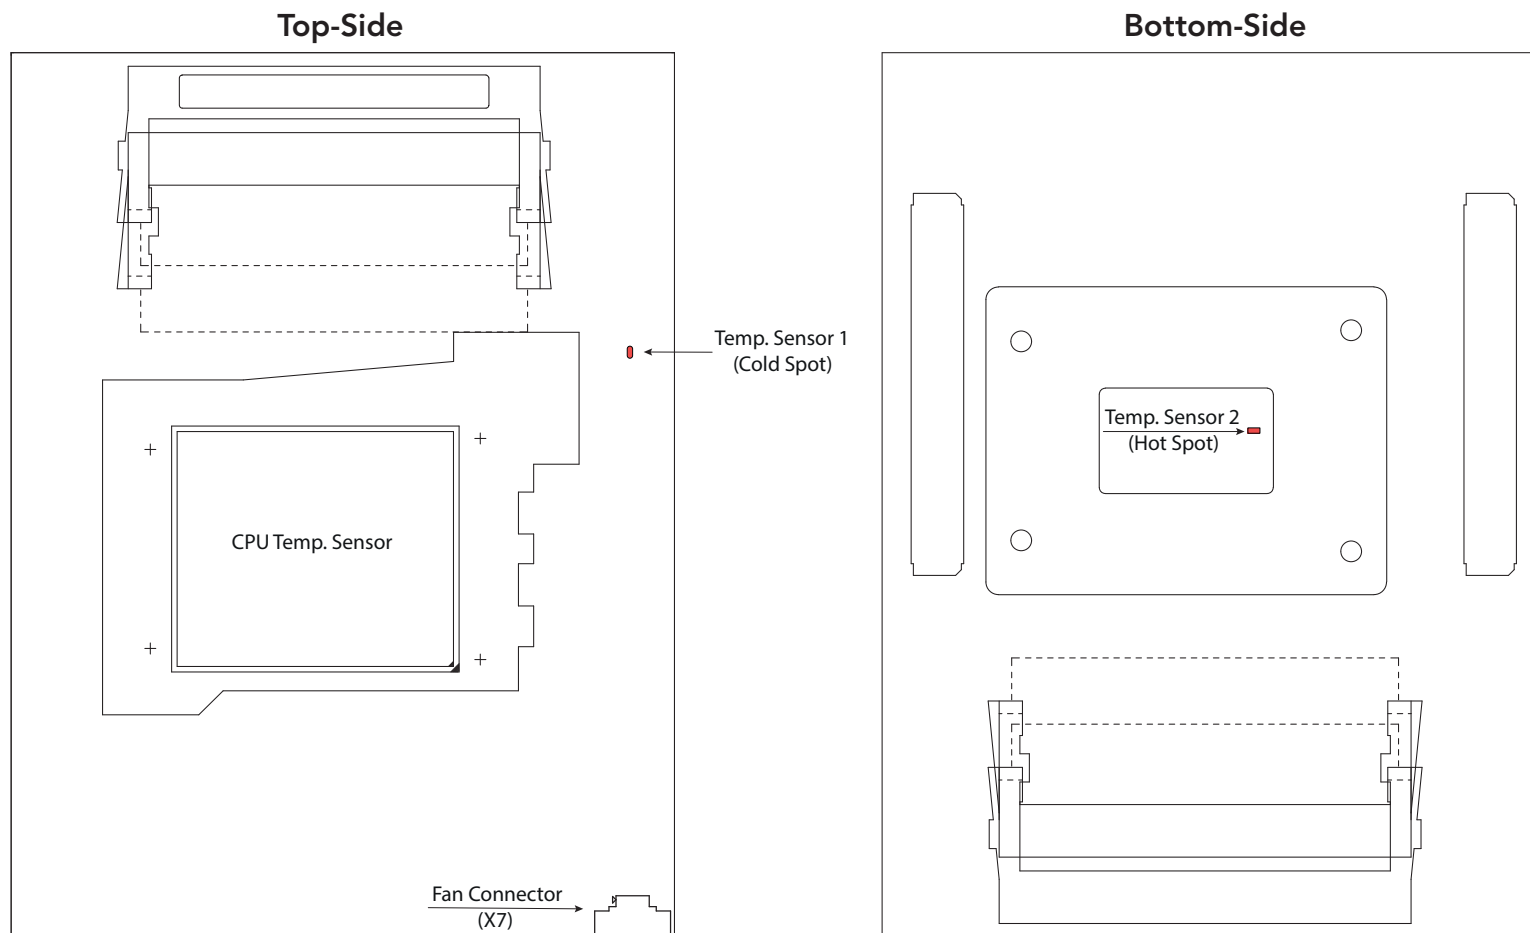

4.3 HPA Dimensions

5 Onboard Temperature Sensors

The conga-HPC/cRLS features two temperature sensors on the top-side and one temperature sensor on the bottom-side. The location of each sensor and the fan connector (X7) is indicated in the drawings below:

6 Connector Rows

The conga-HPC/cRLS is connected to the carrier board via two 400-pin connectors (COM-HPC® Client Module pinout). These connectors are broken down into eight rows. The primary connector J1 consists of rows A, B, C, and D. The secondary connector J2 consists of rows E, F, G, and H. The following subsystems can be found on these connector rows.

6.1 NBASE-T Ethernet

The conga-HPC/cRLS offers two 2.5 Gigabit Ethernet interfaces (ETH[0:1]) via two onboard Intel® i226-LM/V controllers.¹ The interfaces support:

- full-duplex operation at 10/100/1000/2500 Mbps
- half-duplex operation at 10/100 Mbps
- Time-Sensitive Networking (TSN)²

Note

¹ The MAC address of the Intel i226 Ethernet controller is preprogrammed by default. The MAC address cannot be reprogrammed. If you require custom MAC address, contact your local sales representative.

² Not supported in Windows® Operating Systems.

6.2 Serial ATA

The conga-HPC/cRLS offers two Serial ATA interfaces (SATA[0:1]). The interfaces support:

- independent DMA operation
- SATA specification 3.2
- data transfer rates up to 6.0 Gb/s
- AHCI mode using memory space and RAID mode
- Hot-plug detect

Note

The interfaces do not support IDE legacy mode using I/O space.

6.3 PCI Express (PCIe)

The conga-HPC/cRLS offers the following PCIe® lanes:

- up to 14 PCIe® Gen 3 lanes
- up to 12 PCIe® Gen 4 lanes
- up to 16 PCIe® Gen 5 lanes

The lanes support the link configurations listed in the table below:

Table 8 PCIe® Link Configurations

PCIe® Lane	PCIe® Generation (Max. Transfer Rate)	Link Configuration		COM-HPC® Grouping	Source	Comment
		Default	Optional			
PCIe00 - 03	Gen 3 (8 GT/s)	x1	x2, x4	Group 0 Low	Chipset	
PCIe04 - 07	Gen 3 (8 GT/s)	x1	x2, x4		Chipset	
PCIe08 - 11	Gen 4 (16 GT/s)	x4	-	Group 0 High	CPU	PEG port only supports Discrete Graphics (dGFX) and Storage Devices
PCIe12 - 15	Gen 4 (16 GT/s)	x4	x2		Chipset	
PCIe16 - 31	Gen 5 (32 GT/s)	x16	x8	Group 1	CPU	PEG port only supports Discrete Graphics (dGFX) and Storage Devices. Optional 2 x8 link configuration can be set in BIOS Setup: Advanced —> Misc —> PEG Port Configuration A customized BIOS is not required.
PCIe32 - 35	Gen 4 (16 GT/s)	x4	x1, x2	Group 2	Chipset	
PCIe36 - 37	Gen 3 (8 GT/s)	x1	x2		Chipset	
PCIe38 - 39	-	-	-		-	PCIe38 - 39 lanes are not available
PCIe40 - 43	Gen 3 (8 GT/s)	x4	x1, x2		Chipset	PCIe40 - 43 lanes are not available on variants with Intel® Q670E chipset. The optional link configurations are not required by the COM-HPC® Spec.

Note

Optional link configurations require a customized BIOS. Exception: PCIe16 - 31 (see comment for more details).

6.4 USB Ports

The conga-HPC/cRLS offers up to:

- eight USB 2.0 ports
- four USB 3.2 Gen 2x2 ports

Note

For each USB 3.2 Gen 2x2 port, you need one USB 2.0 port with corresponding USB 3.2 SuperSpeed signals. Therefore, the available USB 2.0 ports depends on how many USB 3.2 ports you implement.

6.4.1 USB 2.0 Ports

The conga-HPC/cRLS offers up to eight USB 2.0 ports (USB[0:7]). The ports support:

- USB 2.0 specification
- High-Speed, Full-Speed and Low-Speed USB signaling
- data transfers of up to 480 Mbps (High-Speed mode)

6.4.2 USB 3.2 Ports

The conga-HPC/cRLS offers up to four USB 3.2 Gen 2x2 ports (USB[0:3]). The interfaces support:

- USB 3.2 specification
- wake up from S1-S4 sleep states (each wake up capable port must include USB 3.2 and USB 2.0 signaling)
- data transfers of up to 20 Gbps for USB 3.2 Gen 2x2 port (requires four differential signals and USB-C connector)
- SuperSpeed USB 20 Gbps, SuperSpeed USB 10 Gbps, SuperSpeed USB 5 Gbps, High-Speed, Full-Speed and Low-Speed traffic

Note

For each USB 3.2 Gen 2x2 port, you need one USB 2.0 port with corresponding USB 3.2 SuperSpeed signals. Therefore, the available USB 2.0 ports depends on how many USB 3.2 ports you implement.

6.5 eSPI Interface

The conga-HPC/cRLS offers an eSPI interface for general purpose carrier board devices such as Super I/O, FPGAs, CPLDs and so on. The interface offers two chip select pins for carrier board devices.

Unlike the LPC interface, the eSPI interface runs from a 1.8 V supply.

Caution

Implement a 10 K Ω pull-up resistor to 1.8 VSB on each chip select pin in use on the carrier board (ESPI_CS1# and ESPI_CS2#). Without the pull-up resistor(s), the system may not boot when a device is connected to the eSPI interface on the carrier board.

6.6 Boot SPI Interface

The conga-HPC/cRLS offers a Boot SPI interface for a carrier-based SPI BIOS flash device. The congatec onboard flash device (Winbond W25R256JV (256 Mb)) and TPM device (Infineon SLB9670VQ2.0) are also connected to this Boot SPI interface.

The pins to select the carrier-based SPI BIOS flash device are described in the section 6.7 "BIOS Boot Selection" below.

Note

1. The power supply to the carrier board SPI (VCC_BOOT_SPI) is 3.3 V.
2. The onboard SPI flash is disabled when the carrier board SPI flash is enabled.

6.7 BIOS Boot Selection

The boot select pins BSEL0-BSEL2 are configured to load the BIOS firmware from the conga-HPC/cRLS by default. Optionally, you can configure these pins to load the BIOS firmware from the carrier board SPI flash as described in the table below:

Table 9 BIOS Select Options

BSEL2	BSEL1	BSEL0	Boot Option
1	1	1	Boot from module SPI flash (default)
1	1	0	Boot from carrier board SPI flash

6.8 Display Interfaces

The conga-HPC/cRLS offers four dedicated display interfaces:

- three DP++ interfaces up to HBR3 (8.1 Gbps lane rate)
- one eDP™ interface up to HBR3 (8.1 Gbps lane rate)

The table below shows the supported display combinations and resolutions:

Table 10 Display Combinations and Resolutions

DDI0		DDI1		DDI2		eDP	
Interface	Max. Resolution	Interface	Max. Resolution	Interface	Max. Resolution	Interface	Max. Resolution
DP++	4096x2304 @ 60 Hz, 36 bpp	DP++	4096x2304 @ 60 Hz, 36 bpp	DP++	4096x2304 @ 60 Hz, 36 bpp	eDP	4096x2304 @ 60 Hz, 36 bpp

Note

A single DP display supports max. resolution of 7680 x 4320 @ 60Hz. A single eDP™ display supports max. resolution of 5120 x 3200 @ 120Hz. The actual display resolution depends on several design factors and therefore may be lower on your system.

6.8.1 DisplayPort Dual-Mode (DP++)

The conga-HPC/cRLS offers three DP++ interfaces (DDI[0:2]). Each interface supports:

- VESA® DisplayPort™ Standard 2.1
- HDCP 2.3 and 1.4 content protection
- Various audio formats

6.8.2 Embedded DisplayPort (eDP)

The conga-HPC/cRLS offers one eDP™ interface. This interface supports:

- VESA® Embedded DisplayPort™ Standard 1.4b
- Spread-Spectrum Clocking
- eDP™ display authentication

Note

The eDP™ interface does not support HDCP.

6.9 Camera Serial Interface (CSI) Ports

The conga-HPC/cRLS does not offer MIPI CSI input ports.

6.10 Audio Interfaces

The conga-HPC/cRLS offers the following audio interfaces:

- two MIPI SoundWire® serial audio ports
- one I²S format serial audio port
- one Intel® High Definition Audio (HDA) interface

Note

The SoundWire® and I2S audio ports are not verified because the respective Intel® drivers are currently not available. For a verified audio interface, we recommend to use HDA.

6.11 Asynchronous Serial Port Interfaces

The conga-HPC/cRLS offers two 16C550 compatible UART interfaces (UART[0:1]) via the congatec Board Controller. The interfaces support hardware handshake, flow control, and up to 115200 baud rate.

6.12 I²C Ports

The conga-HPC/cRLS offers two I²C ports (I2C[0:1]) via the congatec Board Controller with support for multi-master and fast mode.

Caution

I2C0 operates with 3.3V while I2C1 operates with 1.8V — as defined in the COM-HPC® Module Base Specification.

Note

1. For the reserved I²C bus addresses, refer to section 10.3 "I2C".
2. You need the congatec CGOS driver and API to access the I²C interface.

6.13 Port 80 Support on USB_PD I2C Bus

The conga-HPC/cRLS offers BIOS Port 80h debug information over the USB Power Delivery I²C Bus (USB_PD_I2C_DAT and USB_PD_I2C_CLK). The debug information is serialized and must be deserialized on the carrier board. For information on how to deserialize and display the debug information on carrier board 7-segment displays, refer to the COM-HPC® Carrier Design Guide.

6.14 General Purpose SPI Port

The conga-HPC/cRLS offers a general purpose SPI port and two chip selects (GPSPI_CS[0:1]) via the congatec Board Controller by default.

Optionally, the general purpose SPI port can be provided via the Intel® chipset instead (assembly option).

6.15 SMBus

The conga-HPC/cRLS offers a System Management Bus (SMBus) via the Intel® chipset. The SMBus can be either always connected or isolated via a switch (BIOS Setup option).

Note

Make sure the address space of the carrier board SMBus devices does not overlap with the address space of the module devices. For the reserved SMBus addresses, refer to section 10.4 "SMBus".

6.16 General Purpose Input Outputs (GPIOs)

The conga-HPC/cRLS offers 12 general purpose inputs and outputs (GPIO_[00:11]) via the congatec Board Controller.

6.17 Power Control

The conga-HPC/cRLS operates with a fixed 12 V input voltage. Its power-up sequence is illustrated below:

The power control signals VIN_PWR_OK, RSTBTN#, SUS_S3#, and PWRBTN# are described below. For more information, refer to the COM-HPC® Module Base Specification.

VIN_PWR_OK

Power OK from main power supply or carrier board voltage regulator circuitry. A high value indicates that the power is good and the module can start its onboard power sequencing. Carrier board hardware should not drive VIN_PWR_OK low after the input power is stable. Hold RSTBTN# low instead to keep the module in a reset condition if necessary.

SUS_S3#

The SUS_S3# signal is an active-low output that can be used to turn on the main outputs of an ATX-style power supply. To accomplish this, invert the signal on the carrier board with an inverter or transistor that is supplied by standby voltage. With SUS_S3#, the conga-HPC/cRLS can control ATX-style power supplies.

1. If you do not use an ATX power supply, do not connect the conga-HPC/cRLS pins SUS_S3#, VCC_5V_SBY and PWRBTN#.
2. If you use an ATX power supply together with the conga-HPC/EVAL-Client, Revision A.1, evaluation carrier board, remove jumper JP12. Otherwise, the conga-HPC/cRLS will not start because the SUS_S3# signal is suppressed. The location of JP12 is indicated in the drawing below:

PWRBTN#

When using ATX-style power supplies, PWRBTN# is used to connect to a momentary-contact, active-low debounced push-button input while the other terminal on the push-button must be connected to ground. This signal is internally pulled up to 3V_SB using a 100 kΩ resistor. When PWRBTN# is asserted it indicates that an operator wants to turn the power on or off. The response to this signal from the system may vary as a result of modifications made in BIOS settings or by system software.

6.18 Inrush Current

The table below compares the inrush current and slew rate values of the conga-HPC/cRLS at different voltage ramp durations.

Table 11 Inrush Current

Power Rail	Inrush Current [A]	Slew Rate [kV/s]	Voltage Ramp [ms]	Comment
VCC	48.00	27.396	0.351	Worst-case scenario
VCC_5V_SBY	10.00	35.902	0.112	
VCC	13.60	9.521	1.010	Typical scenario
VCC_5V_SBY	1.24	3.865	1.045	

Note

Ensure the power supply and decoupling capacitors on the carrier board are adequate for proper power sequencing.

6.19 Power Management

ACPI

The conga-HPC/cRLS supports Advanced Configuration and Power Interface (ACPI) specification, revision 5.0a. It also supports Suspend to RAM (S3). For more information, see section 8.5 "ACPI Suspend Modes and Resume Events".

DEEP Sx

The Deep Sx is a lower power state employed to minimize the power consumption while in S3/S4/S5. In the Deep Sx state, the system entry condition determines if the system context is maintained or not. All power is shut off except for minimal logic which supports limited set of wake events for Deep Sx. The Deep Sx on resumption, puts system back into the state it is entered from. In other words, if Deep Sx state was entered from S3 state, then the resume path will place system back into S3.

S5e Power State

The conga-HPC/cRLS features a congatec proprietary Enhanced Soft-Off power state, described in section 7.2.4 "Enhanced Soft-Off State".

7 Additional Features

The following additional features are available on the conga-HPC/cRLS.

7.1 Integrated Real-Time Hypervisor

The RTS Hypervisor is integrated into the congatec firmware on the conga-HPC/cRLS by default. With the RTS Hypervisor, you can consolidate functionality that previously required multiple dedicated systems on a single x86 hardware platform.

The integrated RTS Hypervisor offers a 30-day free evaluation license. The 30-day evaluation starts when the customer receives the x86-based modules. To access the full package, contact congatec Sales team via the online "Request Quote" button for your particular product at <https://www.congatec.com/en/products/hypervisor-products/>.

To activate the RTS Hypervisor, change the "Boot Device" in the BIOS setup menu to "Integrated RTS Hypervisor".

1. Press F2 or DEL during POST to enter the BIOS setup menu.
2. Go to the Boot tab to enter the Boot setup screen.
3. Select "Integrated RTS Hypervisor" as "1st Boot Device".
4. Go to the Save & Exit tab and select "Save Changes and Exit".

For more information about the integrated Hypervisor, see the congatec Application Note AN56_Hypervisor_on_Module.pdf on the congatec website at <https://www.congatec.com/en/support/application-notes/>.

Note

1. The configuration steps and the BIOS setup menu above are valid for "Type Based Boot Priority". For "UEFI Boot Priority", the BIOS setup menu may differ.
2. The Real-Time Operating System images, driver packages for the General-Purpose Operating System and the installation procedures for the Operating Systems are available for download under the "Technical information" section, in the restricted area of congatec website at www.congatec.com/login. If you require login access, contact your local sales representative.

7.2 congatec Board Controller (cBC)

The conga-HPC/cRLS is equipped with a Microchip microcontroller. This onboard microcontroller plays an important role for most of the congatec embedded/industrial PC features. It fully isolates some of the embedded features such as system monitoring or the I²C bus from the x86 core architecture, which results in higher embedded feature performance and more reliability, even when the x86 processor is in a low power mode. It also ensures that the congatec embedded feature set is fully compatible amongst all congatec modules.

The congatec Board Controller (cBC) supports the following features:

- Board information (See section 7.2.1)
- Watchdog (See section 7.2.2)
- Asynchronous Serial Port Interfaces (See section 6.11)
- I²C Ports (See section 6.12)
- Port 80 Support on USB_PD I2C Bus (See section 6.13)
- General Purpose SPI Port (See section 6.14)
- SMBus (See section 6.15)
- General Purpose Input Outputs (GPIOs) (See section 6.16)
- Fan Control (See section 7.2.3)
- Enhanced Soft-Off State (See section 7.2.4)
- Power Loss Control (See section 7.2.5)

7.2.1 Board Information

The cBC provides a rich data-set of manufacturing and board information such as serial number, EAN number, hardware and firmware revisions, and so on. It also keeps track of dynamically changing data like runtime meter and boot counter.

7.2.2 Watchdog

The cBC provides a multi stage watchdog solution that is triggered by software. For more information about the Watchdog feature, refer to the application note AN3_Watchdog.pdf available at www.congatec.com.

7.2.3 Fan Control

The cBC provides signals for a primary and secondary fan. Signals for the primary fan are routed to onboard connector X7. Signals for the secondary fan are routed to the COM-HPC® connector.

For the location of the onboard connector and information about the temperature sensors, see section 5 "Onboard Temperature Sensors".

The pinout of the primary fan connector (X7) is described in the table below:

Table 12 Primary Fan Connector (X7) Pinout

Pin	Signal
1	GND
2	+12V_FAN
3	CPU_FAN_TACHIN
4	CPU_FAN_PWMOUT

Connector Type

X7: 4x1 pins, 1.25mm pitch (Molex 53261-0471); Possible Mating Connector: Molex 51021-0400

Note

A four wire fan must be used to generate the correct speed readout.

7.2.4 Enhanced Soft-Off State

The cBC provides an enhanced Soft-Off state (S5e)—a congatec proprietary low-power Soft-Off state. In this state, the CPU module switches off almost all the onboard logic to reduce the power consumption to absolute minimum (between 0.8 mA and 1 mA).

The S5e supports power button, sleep button and SMBALERT# wake events. Refer to congatec application note AN36_S5e_Implementation.pdf for detailed description of the S5e state.

7.2.5 Power Loss Control

The cBC provides the power loss control feature. The power loss control feature determines the behaviour of the system after an AC power loss occurs. This feature applies to systems with ATX-style power supplies which support standby power rail.

The term “power loss” implies that all power sources, including the standby power are lost (G3 state). Once power loss (transition to G3) or shutdown (transition to S5) occurs, the board controller continuously monitors the standby power rail. If the standby voltage remains stable for 30 seconds, the cBC assumes the system was switched off properly. If the standby voltage is no longer detected within 30 seconds, the module considers this an AC power loss condition.

The power loss control feature has three different modes that define how the system responds when standby power is restored after a power loss occurs. The modes are:

- Turn On: The system is turned on after a power loss condition
- Remain Off: The system is kept off after a power loss condition
- Last State: The board controller restores the last state of the system before the power loss condition

Note

1. If a power loss condition occurs within 30 seconds after a regular shutdown, the cBC may incorrectly set the last state to “ON”.
2. The settings for power loss control have no effect on systems with AT-style power supplies which do not support standby power rail.
3. The 30 seconds monitoring cycle applies only to the “Last State” power loss control mode.

7.3 OEM BIOS Customization

The conga-HPC/cRLS is equipped with congatec Embedded BIOS, which is based on American Megatrends Inc. Aptio UEFI firmware. The congatec Embedded BIOS allows system designers to modify the BIOS. For more information about customizing the congatec Embedded BIOS, refer to the congatec System Utility user's guide CGUTLm1x.pdf on the congatec website at www.congatec.com or contact technical support.

The supported customization features are described in the following sub-sections.

7.3.1 OEM Default Settings

This feature allows system designers to create and store their own BIOS default configuration. Customized BIOS development by congatec for OEM default settings is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. For information on how to add OEM default settings to the congatec Embedded BIOS, refer to the application note AN8_Create_OEM_Default_Map.pdf available at www.congatec.com.

7.3.2 OEM Boot Logo

This feature allows system designers to replace the standard text output displayed during POST with their own BIOS boot logo. Customized BIOS development by congatec for OEM Boot Logo is no longer necessary because customers can easily perform this configuration by themselves using the congatec system utility CGUTIL. For information on how to add an OEM boot logo to the congatec Embedded BIOS, refer to the application note AN11_Create_And_Add_Bootlogo.pdf available at www.congatec.com.

7.3.3 OEM POST Logo

This feature allows system designers to replace the congatec POST logo displayed in the upper left corner of the screen during BIOS POST with their own BIOS POST logo. Use the congatec system utility CGUTIL 1.5.4 or later to replace/add the OEM POST logo.

7.3.4 OEM DXE Driver

This feature allows designers to add their own UEFI DXE driver to the congatec embedded BIOS. Contact congatec technical support for more information on how to add an OEM DXE driver.

7.4 congatec Battery Management Interface

To facilitate the development of battery powered mobile systems based on embedded modules, congatec GmbH defined an interface for the exchange of data between a CPU module (using an ACPI operating system) and a Smart Battery system. A system developed according to the congatec Battery Management Interface Specification can provide the battery management functions supported by an ACPI capable operating system (for example, charge state of the battery, information about the battery, alarms/events for certain battery states and so on) without the need for additional modifications to the system BIOS.

In addition to the ACPI-Compliant Control Method Battery mentioned above, the latest versions of the conga-HPC/cRLS BIOS and board controller firmware also support LTC1760 battery manager from Linear Technology and a battery only solution (no charger). All three battery solutions are supported on the I²C bus and the SMBus. This gives the system designer more flexibility when choosing the appropriate battery sub-system. For more information about the supported Battery Management Interface, contact your local sales representative.

7.5 API Support (CGOS)

In order to benefit from the above mentioned non-industry standard feature set, congatec provides an API that allows application software developers to easily integrate all these features into their code. The CGOS API (congatec Operating System Application Programming Interface) is the congatec proprietary API that is available for all commonly used Operating Systems such as Win32, Win64, Win CE, Linux. The architecture of the CGOS API driver provides the ability to write application software that runs unmodified on all congatec CPU modules. All the hardware related code is contained within the congatec embedded BIOS on the module. See section 1.1 of the CGOS API software developers guide, available at www.congatec.com.

7.6 Security Features

The conga-HPC/cRLS is equipped with an onboard SPI TPM 2.0 (Infineon SLB9670VQ2.0).

7.7 Suspend to Ram

The conga-HPC/cRLS supports the power saving mode Suspend to RAM (S3).

8 conga Tech Notes

The conga-HPC/cRLS has some technological features that require additional explanation. The following section will give the reader a better understanding of some of these features.

8.1 Adaptive Thermal Monitor and Catastrophic Thermal Protection

Intel® Xeon, Core™ i9/i7/i5/i3 and Celeron® processors have a thermal monitor feature that helps to control the processor temperature. The integrated TCC (Thermal Control Circuit) activates if the processor silicon reaches its maximum operating temperature. The activation temperature that the Intel® Thermal Monitor uses to activate the TCC can be slightly modified via TCC Activation Offset in BIOS setup submenu "CPU submenu".

The Adaptive Thermal Monitor controls the processor temperature using two methods:

- Adjusting the processor's operating frequency and core voltage (EIST transitions)
- Modulating (start/stop) the processor's internal clocks at a duty cycle of 25% on and 75% off

When activated, the TCC causes both processor core and graphics core to reduce frequency and voltage adaptively. The Adaptive Thermal Monitor will remain active as long as the package temperature remains at its specified limit. Therefore, the Adaptive Thermal Monitor will continue to reduce the package frequency and voltage until the TCC is de-activated. Clock modulation is activated if frequency and voltage adjustments are insufficient. Additional hardware, software driver, or operating system support is not required.

Intel® Core™ i7/i5/i3, Celeron® and Pentium® processors use the THERMTRIP# signal to shut down the system if the processor's silicon reaches a temperature of approximately 125°C. The THERMTRIP# signal activation is completely independent from processor activity and therefore does not produce any bus cycles.

Note

1. For THERMTRIP# to switch off the system automatically, use an ATX style power supply.
2. The maximum operating temperature for Intel® Xeon, Core™ i9/i7/i5/i3, and Celeron® processors is 100°C.
3. To ensure that the TCC is active for only short periods of time, thus reducing the impact on processor performance to a minimum, it is necessary to have a properly designed thermal solution. The Intel® Xeon, Core™ i9/i7/i5/i3, and Celeron® processor's respective datasheet can provide you with more information about this subject.

8.2 Processor Performance Control

8.2.1 Enhanced Intel SpeedStep Technology (EIST)

The operating system can manage and choose P-states using the Enhanced Intel® SpeedStep® Technology. This technology offers several key features, including multiple frequencies and voltage points that optimize performance and power efficiency. These operating points are referred to as P-states, and frequency selection is software-controlled by writing to processor model-specific registers (MSRs). The voltage is adjusted based on the selected frequency and the number of active IA cores. Once established, the phase locked loop (PLL) locks onto the target frequency, which is shared by all active IA cores with the same voltage.

In a multi-core processor, the highest frequency P-state requested by any active IA core is selected. Software-requested transitions are permitted at any time, but if a previous transition is in progress, the new transition is deferred until the previous one is completed. The processor internally controls voltage ramp rates to ensure smooth transitions without glitches.

8.2.2 Intel Speed Shift Technology

Intel® Speed Shift Technology is an energy-saving approach to frequency control that relies on hardware rather than operating system control. The operating system is informed of the hardware P-states that are available and can either request a specific P-state or allow the hardware to determine the P-state.

The request made by the operating system is based on the workload requirements and knowledge of the processor's capabilities. Meanwhile, the processor's decision is influenced by various system constraints, such as workload demand, thermal limits, and the minimum and maximum levels of performance requested by the operating system, while taking into account the activity window.

8.2.3 Intel Turbo Boost Technology 2.0

The IA core/processor graphics core of the processor can automatically run faster than its base frequency, using the Intel® Turbo Boost Technology 2.0. This feature operates within power, temperature, and current limits and optimizes performance for both single-threaded and multi-threaded workloads.

With Intel® Turbo Boost Technology 2.0, the application power is directed more towards Thermal Design Power (TDP). The processor can exceed the TDP by going as high as PL2 for short durations. However, if the cooling solution is not designed accordingly, the system may face performance and thermal issues as more applications will run at the maximum power limit for extended periods. For more information about Intel® Turbo Boost 2.0 Technology visit the Intel® website.

8.2.4 Intel Performance Hybrid Architecture

The Intel® Performance Hybrid Architecture comprises two core types, namely P-Cores and E-Cores:

- P-Cores refer to performance cores
- E-Cores refer to efficient cores

Both P-Cores and E-Cores utilize the same instruction set and model-specific registers (MSRs). However, when hybrid computing is enabled, the available instruction sets are fewer than those available to P-Cores. The processor algorithm determines the frequency of both P-Cores and E-Cores to optimize performance and power usage. The Intel® Performance Hybrid Architecture architecture is optimized for a wide range of workload types, including:

- single threaded
- partially threaded
- multi threaded

For more information about Intel® Performance Hybrid Architecture, refer to the Intel® website:

<https://www.intel.com/content/www/us/en/developer/articles/technical/hybrid-architecture.html>

8.3 Intel® Virtualization Technology

Intel® Virtualization Technology (Intel® VT) makes a single system appear as multiple independent systems to software. With this technology, multiple, independent operating systems can run simultaneously on a single system. The technology components support virtualization of platforms based on Intel® architecture microprocessors and chipsets. Intel® Virtualization Technology for Intel® 64 and Intel® Architecture (Intel® VT-x) added hardware support in the processor to improve the virtualization performance and robustness.

RTS Real-Time Hypervisor supports Intel® VT and is verified on all current congatec x86 hardware.

congatec supports RTS Hypervisor.

8.4 Thermal Management

ACPI is responsible for allowing the operating system to play an important part in the system's thermal management. This results in the operating system having the ability to implement cooling decisions according to the demands of the application.

The conga-HPC/cRLS offers hardware-based support for passive and active cooling. Passive cooling is implemented in the Intel CPU via the Thermal Control Circuit (TCC) Activation Offset setting in the CPU configuration setup sub-menu. The TCC in the processor is activated at 100°C by default but can be lowered by the Activation Offset—for example, an activation offset of "10" will activate TCC at 90°C. ACPI OS support is not required. See section 8.1 "Adaptive Thermal Monitor and Catastrophic Thermal Protection" for more information.

The congatec Board Controller (cBC) supports active cooling solution. The cBC controls the fan's speed based on the temperature readings of the CPU. This feature does not require ACPI OS support. The only software-controlled thermal trip point on conga-HPC/cRLS is the Critical Trip Point. The active or passive cooling policy should ensure that the CPU temperature does not reach this trip point. However, if the critical trip point is reached, the OS will shut down properly in order to prevent damage to the system. Use the "critical trip point" setup node in the BIOS setup menu to determine the temperature threshold at which the system shuts down.

The Automatic Critical Trip Point BIOS setting shuts down the system at 5°C above the maximum specified temperature of the processor.

8.5 ACPI Suspend Modes and Resume Events

The conga-HPC/cRLS BIOS supports S3 (Suspend to RAM), S4 (Suspend to Disk) and S5 (Soft-Off). The table below lists the events that wake the system from S3.

Table 13 Wake Events

Wake Event	Conditions/Remarks
Power Button	Wakes unconditionally from S3-S5
Onboard LAN Event	Device driver must be configured for Wake On LAN support
SMB_ALERT#	Wakes unconditionally from S3-S5; S5e
PCI Express WAKE#	Wakes unconditionally from S3-S5
WAKE#	Wakes unconditionally from S3
PME#	Activate the wake up capabilities of a PCI device using Windows device manager configuration options for this device or set "Resume On PME#" to "Enabled" in the power setup menu
USB Mouse/Keyboard Event	When "Standby mode" is set to S3, USB hardware must be powered by standby power source. Set "USB Device Wakeup" from S3/S4 to "Enabled" in the ACPI setup menu (if setup node is available in BIOS setup program) In device manager, look for the keyboard/mouse devices. Go to the power management tab and check "Allow this device to bring the computer out of standby".
RTC Alarm	Activate and configure "Resume On RTC Alarm" in the power setup menu (only available in S5)
Watchdog Power Button Event	Wakes unconditionally from S3-S5

8.6 Memory Population Rules

The diagram below shows the location of the four memory slots (X1, X2, X3, and X4) on standard conga-HPC/cRLS module variants:

The following population rules must be observed:

- Either X1 or X4 must be populated or the system will not boot (POST code 55)
- All populated memory modules should have the same part number for optimal performance and to avoid potential issues
- Do not mix ECC and non-ECC memory modules

Note

1. When populating single-rank (1R) memory modules, the BIOS automatically sets the speed to 4000 MT/s.
2. When populating one dual-rank (2R) memory module, the BIOS automatically sets the speed to 3600 MT/s.
3. When populating more than one dual-rank (2R) memory module, the BIOS automatically sets the speed to 3200 MT/s.

9 Signal Descriptions and Pinout Tables

This section describes the signals found on the conga-HPC/cRLS. The pinout complies with PICMG® COM-HPC®, revision 1.10. The table below describes the terminology used in this section. The PU/PD column indicates if a pull-up or pull-down resistor has been used. If the field entry area in this column for the signal is empty, then no pull-up or pull-down resistor has been implemented by congatec.

The “#” symbol at the end of the signal name indicates that the active or asserted state occurs when the signal is at a low voltage level. When “#” is not present, the signal is asserted when at a high voltage level.

Note

The Signal Description tables do not list internal pull-ups or pull-downs implemented by the chip vendors. Only pull-ups or pull-downs implemented by congatec are listed. For information about the internal pull-ups or pull-downs implemented by the chip vendors, refer to the respective chip's datasheet.

Table 14 Signal Description Terminology

Term	Description
PU	congatec implemented pull-up resistor
PD	congatec implemented pull-down resistor
T	Higher voltage tolerance
I 1.8 VSB	Input 1.8 V tolerant active in standby state
O 1.8 VSB	Output 1.8 V tolerant active in standby state
I/O 1.8 VSB	Bi-directional signal 1.8 V tolerant active in standby state
I 3.3 V	Input 3.3 V tolerant
O 3.3 V	Output 3.3 V signal level
I/O 3.3 V	Bi-directional signal 3.3 V tolerant
I 3.3 VSB	Input 3.3V tolerant active in standby state
O 3.3 VSB	Output 3.3V tolerant active in standby state
I/O 3.3 VSB	Bi-directional signal 3.3 V tolerant active in standby state
I 5 VSB	Input 5 V tolerant active in standby state
OD	Open drain output
V _{OL}	Output low voltage
V _{OH}	Output high voltage
P	Power Input/Output
DDC	Display Data Channel
PCIE	PCI Express®
SATA	Serial ATA
REF	Reference voltage output. May be sourced from a module power plane.
KR	10GBASE-KR compatible signal
PDS	Pull-down strap. A module output pin that is either tied to GND or is not connected. Used to signal module capabilities (pinout type) to the Carrier Board.

9.1 Connector Signal Descriptions

Table 15 Primary Connector (J1) Pinout

Pin	Row A	Pin	Row B	Pin	Row C	Pin	Row D

The MDI can operate in 10 Gbps, 1 Gbps, 100 Mbps and 10 Mbps modes. Some pairs are unused in some modes, per the following: <table><tr><td></td><td>1000BASE-T 1000BASE-T</td><td>100BASE-TX</td><td>10BASE-T</td></tr><tr><td>MDI[0]+/-</td><td>B1_DA+/-</td><td>TX+/-</td><td>TX+/-</td></tr><tr><td>MDI[1]+/-</td><td>B1_DB+/-</td><td>RX+/-</td><td>RX+/-</td></tr><tr><td>MDI[2]+/-</td><td>B1_DC+/-</td><td></td><td></td></tr><tr><td>MDI[3]+/-</td><td>B1_DD+/-</td><td></td><td></td></tr></table>		1000BASE-T 1000BASE-T	100BASE-TX	10BASE-T	MDI[0]+/-	B1_DA+/-	TX+/-	TX+/-	MDI[1]+/-	B1_DB+/-	RX+/-	RX+/-	MDI[2]+/-	B1_DC+/-			MDI[3]+/-	B1_DD+/-			I/O MDI 3.3 VSB		
	1000BASE-T 1000BASE-T	100BASE-TX	10BASE-T																						
MDI[0]+/-	B1_DA+/-	TX+/-	TX+/-																						
MDI[1]+/-	B1_DB+/-	RX+/-	RX+/-																						
MDI[2]+/-	B1_DC+/-																								
MDI[3]+/-	B1_DD+/-																								
NBASET0_LINK_ACT# NBASET1_LINK_ACT#	D99 E81	NBASE-T Ethernet Controller activity indicator, active low. 20 mA or more current sink capability at V _{OL} of 0.4V max. 20 mA or more current source capability at V _{OH} of 2.4V min.	O 3.3 VSB																						
NBASET0_LINK_MAX# NBASET1_LINK_MAX#	D97 E82	NBASE-T Ethernet Controller MAX Speed Link indicator, active low. If active, the link is established at the maximum speed that the Ethernet controller is capable of (which may be 10G, 5G, 2.5G etc). 20 mA or more current sink capability at V _{OL} of 0.4V max. 20 mA or more current source capability at V _{OH} of 2.4V min.	O 3.3 VSB																						
NBASET0_LINK_MID# NBASET1_LINK_MID#	D98 E80	NBASE-T Ethernet Controller MID Speed Link indicator, active low. If active, the link is established but at a speed lower than what the maximum speed that the Ethernet controller is capable of. 20 mA or more current sink capability at V _{OL} of 0.4V max. 20 mA or more current source capability at V _{OH} of 2.4V min.	O 3.3 VSB																						
NBASET0_CTREF NBASET1_CTREF	C99 E78	Reference voltage for Carrier Board NBASET Ethernet channel 0 magnetics center tap. The reference voltage is determined by the requirements of the Module PHY and may be as low as 0V and as high as 3.3V. If not needed, these pins may be left open on the Carrier. The reference voltage output shall be current limited on the Module. In the case in which the reference is shorted to ground, the current shall be limited to 250 mA or less.	REF		Not connected																				
NBASET0_SDP NBASET1_SDP	C98 E79	NBASE-T Ethernet Controller 0 Software-Definable Pin. Can also be used for IEEE1588 support such as a 1pps signal.	I/O 3.3 VSB																						

Table 18 Ethernet KR and KX Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
ETH0_TX+ ETH0_TX-	F87 F86	Ethernet KR ports, transmit output differential pairs.	O KR		Not connected
ETH0_RX+ ETH0_RX-	E88 E87	Ethernet KR ports, receive input differential pairs.	I KR		
ETH1_TX+ ETH1_TX-	F90 F89	Ethernet KR ports, transmit output differential pairs.	O KR		Not connected
ETH1_RX+ ETH1_RX-	E91 E90	Ethernet KR ports, receive input differential pairs.	I KR		
ETH0-1_MDIO_DAT	H99	Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 1	I/O 3.3 V	PU 2.2 K Ω 3.3 VSB	Not supported
ETH0-1_MDIO_CLK	H98	Clock signal for Management Data I/O interface mode data signal for serial data transfers between the MAC and an external PHY for ETHx ports 0 to 1.	O 3.3 V		Not connected
ETH0-1_INT#	G99	Active low interrupt signal from IO Port expanders for ETH ports 0 to 1.	I 3.3 V	PU 2.2 K Ω 3.3 VSB	Not supported
ETH0-1_PHY_INT#	G98	Active low PHY interrupt signal from ETH ports 0 to 1.	I 3.3 V	PU 2.2 K Ω 3.3 VSB	
ETH0-1_PHY_RST#	F97	Active low output PHY reset signal for ETH ports 0 to 1.	O 3.3 V	PD 0 R Ω	
ETH0-1_I2C_DAT	G97	I2C data signal of the 2-wire management interface used by the Ethernet KR controller to access the management registers of an external SFP Module or to configure the Carrier PHY for ETHx ports 0 to 3 (Server) or 0 to 1 (Client) and for serialized status information (e.g. LED states).	I/O OD 3.3 V	PU 2.2 K Ω 3.3 VSB	
ETH0-1_I2C_CLK	G96	The I2C clock signals associated with ETH0-3 I2C data lines in the row above.	I/O OD 3.3 V	PU 2.2 K Ω 3.3 VSB	
ETH0_SDP ETH1_SDP	F98 F99	Software-Definable Pins. Can also be used for IEEE1588 support such as a PPS signal.	I/O 3.3 V		Not connected
ETH0-1_PRSENT#	F96	Carrier pulls this line to GND if there is Carrier hardware present to support Ethernet KR signaling on ETH0 or ETH1. If only one KR channel is supported, it should be on ETH0.	I 3.3 V	PU 2.2 K Ω 3.3 VSB	Not supported

The conga-HPC/cRLS does not support Ethernet KR and KX interfaces.

Table 19 SATA Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SATA0_TX+ SATA0_TX-	D53 D52	Serial ATA channel 0, Transmit Output differential pair.	O SATA		Supports Serial ATA specification 3.2
SATA0_RX+ SATA0_RX-	D50 D49	Serial ATA channel 0, Receive Input differential pair.	I SATA		
SATA1_TX+ SATA1_TX-	D59 D58	Serial ATA channel 1, Transmit Output differential pair.	O SATA		Supports Serial ATA specification 3.2
SATA1_RX+ SATA1_RX-	D56 D55	Serial ATA channel 1, Receive Input differential pair.	I SATA		

Table 20 PCI Express Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment

PCIE47_RX+ PCIE47_RX-	G43 G42	PCI Express Receive Input Differential Pairs 47	I PCIE		
PCIE_BMC_TX+ PCIE_BMC_TX-	A60 A59	PCI Express Differential Transmit Pair for Carrier BMC	O PCIE		Not connected
PCIE_BMC_RX+ PCIE_BMC_RX-	B59 B58	PCI Express Differential Receive Pair for Carrier BMC	I PCIE		
PCle_REFCLK0_LO+ PCle_REFCLK0_LO-	C60 C59	Reference clock pair for PCIe lanes [0:7], also referred to as PCIe Group 0 Low and for the PCle_BMC link	O LV_DIFF		
PCle_REFCLK0_HI+ PCle_REFCLK0_HI-	C57 C56	Reference clock pair for PCIe lanes [8:15] also referred to as PCIe Group 0 High	O LV_DIFF		

PCle_REFCLK1+ PCle_REFCLK1-	E94 E93	Reference clock pair for PCIe lanes [16:31] also referred to as PCIe Group 1	O LV_DIFF		
PCle_REFCLK2+ PCle_REFCLK2-	F93 F92	Reference clock pair for PCIe lanes [32:47] also referred to as PCIe Group 2	O LV_DIFF		
PCle_CLKREQ0_LO#	A56	PCIe reference clock request signal from Carrier devices for PCIe_REFCLK0_LO clock pair	Bi-Dir OD 3.3V	PU 10 K Ω 3.3 V	
PCle_CLKREQ0_HI#	A57	PCIe reference clock request signal from Carrier devices for PCIe_REFCLK0_HI clock pair	Bi-Dir OD 3.3V	PU 10 K Ω 3.3 V	
PCle_CLKREQ1#	E96	PCIe reference clock request signal from Carrier devices for PCIe_REFCLK1 clock pair	Bi-Dir OD 3.3V	PU 10 K Ω 3.3 V	
PCle_CLKREQ2#	E97	PCIe reference clock request signals from Carrier devices for PCIe_REFCLK2 clock pair	Bi-Dir OD 3.3V	PU 10 K Ω 3.3 V	
PEG_LANE_REV#	G19	PCI Express Graphics lane reversal input strap. Pull low on the Carrier Board to reverse lane order, otherwise leave COM-HPC pin open. Pulled up on Module or Module chipset to chipset specific power rail.	I 3.3V	PU 100 K Ω 3.3 V	

PCI Express Additional Signals to Support Module-based PCIe Targets

PCle_REFCLKIN0+ PCle_REFCLKIN0-	H93 H92	Reference clock inputs allowing Carrier based root to operate with Module based PCIe targets. The Module designer making use of these clocks should terminate them in a way appropriate to that design.	I LV_DIFF 3.3V		Not connected
PCle_REFCLKIN1+ PCle_REFCLKIN1-	H96 H95	Reference clock inputs allowing Carrier based root to operate with Module based PCIe targets. The Module designer making use of these clocks should terminate them in a way appropriate to that design.	I LV_DIFF 3.3V		Not connected
PCle_WAKE_OUT0#	G100	Wake request signal from Module based PCIe Target to an off-Module PCIe Root complex.	OD 3.3VSB		Not connected
PCle_WAKE_OUT1#	H100	Wake request signal from Module based PCIe Target to an off-Module PCIe Root complex.	OD 3.3VSB		Not connected
PCle_PERST_IN0#	E100	Reset signals into Module to reset Module PCIe Targets.	I 3.3V		Not connected
PCle_PERST_IN1#	F100	Reset signals into Module to reset Module PCIe Targets.	I 3.3V		Not connected

Table 21 USB Signal Descriptions

USB	Pin #	Description	I/O	PU/PD	Comment
USB0+ USB0-	D17 D16	USB 2.0 differential pairs, channels 0 through 7. USB0 may be configured as a USB client or as a host, or both at the Module designer's discretion. All other USB ports, if implemented, shall be host ports. If any SuperSpeed ports are implemented, then they must be supported by a USB 2.0 port, using one of the USB[0:3] ports from this pool. Specific pairings are detailed below.	I/O USB 3.3 VSB		
USB1+ USB1-	D14 D13		I/O USB 3.3 VSB		
USB2+ USB2-	C18 C17		I/O USB 3.3 VSB		
USB3+ USB3-	C15 C14		I/O USB 3.3 VSB		
USB4+ USB4-	B17 B16		I/O USB 3.3 VSB		
USB5+ USB5-	B14 B13		I/O USB 3.3 VSB		
USB6+ USB6-	A18 A17		I/O USB 3.3 VSB		
USB7+ USB7-	A15 A14		I/O USB 3.3 VSB		
USB0_SSTX0+ USB0_SSTX0-	D44 D43	Four sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 2 2x2 port 0. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface. This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB0 USB 2.0 differential pairs)	O USB SS		Supports USB 3.2 Gen 2 x 2
USB0_SSRX0+ USB0_SSRX0-	C45 C44		I USB SS		
USB0_SSTX1+ USB0_SSTX1-	D47 D46		O USB SS		
USB0_SSRX1+ USB0_SSRX1-	C48 C47		I USB SS		
USB1_SSTX0+ USB1_SSTX0-	D38 D37	Four sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 2 2x2 port 1. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface. This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB1 USB 2.0 differential pairs)	O USB SS		Supports USB 3.2 Gen 2 x 2
USB1_SSRX0+ USB1_SSRX0-	C39 C38		I USB SS		
USB1_SSTX1+ USB1_SSTX1-	D41 D40		O USB SS		
USB1_SSRX1+ USB1_SSRX1-	C42 C41		I USB SS		

USB2_SSTX0+ USB2_SSTX0-	H03 H02	Four sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 2 2x2 port 2. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface.	O USB SS		Supports USB 3.2 Gen 2 x 2
USB2_SSRX0+ USB2_SSRX0-	G04 G03		I USB SS		
USB2_SSTX1+ USB2_SSTX1-	H06 H05	This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB2 USB 2.0 differential pairs)	O USB SS		
USB2_SSRX1+ USB2_SSRX1-	G07 G06		I USB SS		
USB3_SSTX0+ USB3_SSTX0-	H09 H08	Four sets of SuperSpeed differential pairs, used to realize one USB 3.2 Gen 2 2x2 port 3. Alternatively, USB 3.2 Gen 1 or Gen 2 ports (single TX pair, single RX pair per port) may be implemented using a portion of this interface.	O USB SS		Supports USB 3.2 Gen 2 x 2
USB3_SSRX0+ USB3_SSRX0-	G10 G09		I USB SS		
USB3_SSTX1+ USB3_SSTX1-	H12 H11	This port shall be used in conjunction with the corresponding USB 2.0 port pair (e.g. USB3 USB 2.0 differential pairs)	O USB SS		
USB3_SSRX1+ USB3_SSRX1-	G13 G12		I USB SS		
USB01_OC#	B28	USB over-current sense, USB channels 0,1; channels 2,3; channels 4,5 and channels 6,7 respectively. A pull-up for each of these lines to the 3.3V Suspend rail shall be present on the Module. The pull-up should be 10K. An open drain driver from USB current monitors on the Carrier Board may drive this line low. The Carrier Board shall not pull these lines up. Note that the over-current limits for USB 2.0 and USB 3.0 are different; this is a Carrier board implementation item.	I 3.3VSB	PU 10 KΩ 3.3 VSB	
USB23_OC#	B27			PU 10 KΩ 3.3 VSB	
USB45_OC#	B26			PU 10 KΩ 3.3 VSB	
USB67_OC#	B25			PU 10 KΩ 3.3 VSB	
RSMRST_OUT#	B86	USB devices that are to be powered in the S5 / S4 / S3 Suspend states should not have their 5V VBUS power enabled before RSMRST_OUT# transitions to the high state.	O 3.3 VSB	PD 100 KΩ	

Table 22 USB4 Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
USB0_AUX+ USB0_AUX-	B44 B43	DisplayPort Aux channel for USB4® DP modes High speed differential pair	LV_DIFF		Not connected
USB1_AUX+ USB1_AUX-	C36 C35	DisplayPort Aux channel for USB4® DP modes High speed differential pair	LV_DIFF		Not connected
USB2_AUX+ USB2_AUX-	H15 H14	DisplayPort Aux channel for USB4® DP modes High speed differential pair	LV_DIFF		Not connected
USB3_AUX+ USB3_AUX-	H18 H17	DisplayPort Aux channel for USB4® DP modes High speed differential pair	LV_DIFF		Not connected
USB0_LSTX	B41	Sideband TX interface for USB4® Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V	PD 1 M Ω	Not supported
USB0_LSRX	B40	Sideband RX interface for USB4® Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V	PD 1 M Ω	
USB1_LSTX	B39	Sideband TX interface for USB4 Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V	PD 1 M Ω	Not supported
USB1_LSRX	B38	Sideband RX interface for USB4® Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V	PD 1 M Ω	
USB2_LSTX	G18	Sideband TX interface for USB4® Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V	PD 1 M Ω	Not supported
USB2_LSRX	G17	Sideband RX interface for USB4® Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V	PD 1 M Ω	
USB3_LSTX	G16	Sideband TX interface for USB4® Alternate modes "Low Speed" asynchronous serial TX line	O 3.3 V	PD 1 M Ω	Not supported
USB3_LSRX	G15	Sideband RX interface for USB4® Alternate modes "Low Speed" asynchronous serial RX line	I 3.3 V	PD 1 M Ω	
SML0_DAT	B33	Data line for I2C data based System Management Links between chipset masters and Carrier. SML0 is used to control the Carrier based USB re-timers and	Bi-Dir OD 3.3 VSB	PU 2.2 K Ω 3.3 VSB	
SML1_DAT	B30	Data line for I2C data based System Management Links between chipset masters and Carrier. SML1 controls the Carrier based USB Power Delivery Controller.	Bi-Dir OD 3.3 VSB	PU 1 K Ω 3.3 VSB	
SML0_CLK	B32	Clock line for System Management Link 0. SML0 is used to support Carrier USB4® Re-Timers	Bi-Dir OD 3.3 V	PU 2.2 K Ω 3.3 VSB	
SML1_CLK	B29	Clock line for System Management Link 1. SML1 is used to support Carrier USB Power Delivery (PD) Controller.	Bi-Dir OD 3.3 V	PU 1 K Ω 3.3 VSB	
PMCALERT#	B31	Active low alert signal associated with the SML1 System Management link, from the Carrier based USB Power Delivery Controller.	I 3.3 V	PU 10 K Ω 3.3 VSB	

USB_RT_ENA	B37	Power Enable for Carrier based USB Retimers. Sourced from chipset GPO. "USB Re-Timer Enable".	O 3.3 V	PD 100 K Ω	
USB_PD_I2C_DAT	B36	I2C data line between Module based Embedded Controller master and Carrier based USB Power Delivery Controller slave.	Bi-Dir OD 3.3 VSB	PU 1 K Ω 3.3 VSB	
USB_PD_I2C_CLK	B35	I2C clock line between Module based Embedded Controller master and Carrier based USB Power Delivery Controller slave.	Bi-Dir OD 3.3 VSB	PU 1 K Ω 3.3 VSB	
USB_PD_ALERT#	B34	Active low Alert signal from USB Power Delivery Controller to the Module Embedded Controller.	I 3.3 VSB	PU 100 K Ω 3.3 VSB	
Additional Signals to Support USB4® Implementation					
PLTRST#	A12	Platform Reset: output from Module to Carrier Board. Active low. Issued by Module chipset and may result from a low RSTBTN# input, a low VIN_PWR_OK input, a VCC power input that falls below the minimum specification, a watchdog timeout, or may be initiated by the Module software. PLTRST# should remain asserted (low) while the RSTBTN# is low.	O 3.3 VSB	PD 100 K Ω	
SUS_S4_S5#	C08	Indicates system is in Suspend to Disk (S4) or Soft Off (S5) state. Active low output.	O 3.3 VSB	PD 100 K Ω	

Table 23 eSPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
eSPI_IO0 eSPI_IO1 eSPI_IO2 eSPI_IO3	A50 A51 A52 A53	eSPI Master Data Input / Outputs. These are bi-directional input/output pins used to transfer data between master and slaves.	I/O 1.8 VSB		
eSPI_CS0#	B54	eSPI Master Chip Select Outputs. A low selects a particular eSPI slave for the transaction. Each of the eSPI slaves is connected to a dedicated Chip Select pin. If an eSPI_CSx# pins is not in use, it shall be either pulled high or actively driven high.	O 1.8 VSB		See caution below
eSPI_CS1#	B55		O 1.8 VSB		See caution below
eSPI_CLK	A54	eSPI Master Clock Output. This pin provides the reference timing for all the serial input and output operations.	O 1.8 VSB		
eSPI_ALERT0# eSPI_ALERT1#	B52 B53	eSPI pins used by eSPI slave to request service from the eSPI master.	I 1.8 VSB	PU 10 K Ω 1.8 VSB	
eSPI_RST#	B56	eSPI Reset - resets the eSPI interface for both master and slaves. eSPI_RST# is typically driven from the eSPI master to eSPI slaves.	O 1.8 VSB	PD 75 K Ω	

Caution

Implement a 10 K Ω pull-up resistor to 1.8 VSB on each chip select pin in use on the carrier board (eSPI_CS1# and eSPI_CS2#). Without the pull-up resistor(s), the system may not boot when a device is connected to the eSPI interface on the carrier board.

Table 24 Boot SPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
BOOT_SPI_CS#	B48	Chip select for Carrier Board SPI If the BOOT_SPI_CS# pin is not in use, it shall be either pulled high or actively driven high.	O VCC_BOOT_SPI	PU 10 K Ω 3.3 VSB	
BOOT_SPI_IO0 ¹	C50	Bidirectional 4 bit data path out of and into a Carrier SPI flash operating in Serial Quad Interface (SQI) mode. If the flash memory device is operating in traditional Serial Peripheral Interface (SPI) mode, then signal BOOT_SPI_IO0 is used for getting serial data into the flash device (referred to as SI or MOSI in SPI Flash data sheets) and signal BOOT_SPI_IO1 is used to get serial data from the flash device (referred to as SO or MISO in flash data sheets)	I/O VCC_BOOT_SPI	PU 4.75 K Ω 3.3 VSB	Boot strap signal (see note below)
BOOT_SPI_IO1	C51				
BOOT_SPI_IO2 ¹	C52			PU 100 K Ω 3.3 VSB	Boot strap signal (see note below)
BOOT_SPI_IO3 ¹	C53			PU 100 K Ω 3.3 VSB	Boot strap signal (see note below)
BOOT_SPI_CLK	C54	Clock from Module chipset to Carrier SPI	O VCC_BOOT_SPI	PD 100K	
VCC_BOOT_SPI	B47	Power supply for Carrier Board SPI – sourced from Module – nominally 1.8 V or 3.3 V. The Module shall provide a minimum of 100 mA on VCC_BOOT_SPI. Carriers shall use less than 100 mA from this power source. VCC_BOOT_SPI shall only be used to power SPI devices on the Carrier Board. The Module vendor may choose what power domains the BOOT_SPI is active in.	Power (Out from Module)		3.3 VSB (active in suspend state)

**Note**

¹. This signal has a special functionality during the reset process. It may strap some basic important function of the module. For more information refer to section 9.2 "Boot Strap Signals".

Table 25 BIOS Select Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
BSEL2	B51	Boot Select pins. These pins distinguish between an SPI or eSPI BIOS boot and between an on-Module or off-Module BIOS.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	Pulled up to 3.3 VSB (active in suspend state)
BSEL1	B50		I 3.3 VSB	PU 10 K Ω 3.3 VSB	
BSEL0	B49	Pulled up on Module to vendor specific power rail.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	

Table 26 DDI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
DDIO_PAIR0+ DDIO_PAIR0-	D23 D22	Digital Display Interface 0 differential pair 0	O LV_DIFF		
DDIO_PAIR1+ DDIO_PAIR1-	D26 D25	Digital Display Interface 0 differential pair 1	O LV_DIFF		
DDIO_PAIR2+ DDIO_PAIR2-	D29 D28	Digital Display Interface 0 differential pair 2	O LV_DIFF		
DDIO_PAIR3+ DDIO_PAIR3-	D32 D31	Digital Display Interface 0 differential pair 3	O LV_DIFF		
DDI1_PAIR0+ DDI1_PAIR0-	A24 A23	Digital Display Interface 1 differential pair 0	O LV_DIFF		
DDI1_PAIR1+ DDI1_PAIR1-	A27 A26	Digital Display Interface 1 differential pair 1	O LV_DIFF		
DDI1_PAIR2+ DDI1_PAIR2-	A30 A29	Digital Display Interface 1 differential pair 2	O LV_DIFF

CSI1_I2C_CLK	H86	CSI-2 Mode: I2C Clock line	O OD 1.8 V		Not connected
CSI0_RST#	G90	Active low Reset signals for CSI port 0	O 1.8 V		Not connected
CSI1_RST#	H89	Active low Reset signals for CSI port1	O 1.8 V		Not connected
CSI0_ENA	G91	Active high Enable signals for CSI port 0	O 1.8 V		Not connected
CSI1_ENA	H90	Active high Enable signals for CSI port 1	O 1.8 V		Not connected

The conga-HPC/cRLS does not support the MIPI Camera Serial Interface (CSI).

Table 29 Soundwire Audio Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SNDW_DMIC_DAT0	C24	Bi-directional PCM audio data	I/O 1.8 V		
SNDW_DMIC_DAT1	C21	Bi-directional PCM audio data	I/O 1.8 V		
SNDW_DMIC_CLK0	C23	Clock for Soundwire transactions	O 1.8 V		
SNDW_DMIC_CLK1	C20	Clock for Soundwire transactions	O 1.8 V		

The SoundWire® and I2S audio ports are not verified because the respective Intel® drivers are currently not available. For a verified audio interface, we recommend to use HDA.

Table 30 I2S / Soundwire / HDA Audio Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
I2S_CLK/ SNDW_CLK2/ HDA_BITCLK	B23	I2S Clock Alternative use as Soundwire 2 clock or Serial data clock generated by the external HDA codec	O 1.8 V		
I2S_DIN/ SNDW_DAT2/ HDA_SDIN	B22	I2S Data In. This pin is an input in I2S mode. Alternative use as bi-directional Soundwire 2 data lane or Serial TDM data input	I/O 1.8 V		
I2S_DOUT/ SNDW_DAT3/ HDA_SDOU ¹	B20	I2S Data Out. This pin is an input in I2S mode Alternative use as bi-directional Soundwire 2 data lane or Serial TDM data output to the codec	I/O 1.8 V		Boot strap signal (see note below)
I2S_LRCLK/ SNDW_CLK3/ HDA_SYNC	B19	I2S L/R Clock Alternative use as Soundwire 3 clock or Sample-synchronization signal to the codec	O 1.8 V		
I2S_MCLK/ HDA_RST#	B21	I2S Master Clock Alternative use as Reset output to codec; active low	O 1.8 V	PD 100 KΩ	

- ¹ This signal has a special functionality during the reset process. It may strap some basic important function of the module. For more information refer to section 9.2 "Boot Strap Signals".
- ² The SoundWire® and I2S audio ports are not verified because the respective Intel® drivers are currently not available. For a verified audio interface, we recommend to use HDA.

Table 31 Asynchronous Serial Port Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
UART0_TX	C89	Logic level asynchronous serial port transmit signal	O 3.3 V		
UART0_RX	C90	Logic level asynchronous serial port receive signal	I 3.3 V	PU 47.5 K Ω 3.3 V	
UART0_RTS#	C91	Logic level asynchronous serial port Request to Send signal, active low	O 3.3 V		
UART0_CTS#	C92	Logic level asynchronous serial port Clear to Send input, active low	I 3.3 V	PU 47.5 K Ω 3.3 V	
UART1_TX	B87	Logic level asynchronous serial port transmit signal	O 3.3 V		
UART1_RX	B88	Logic level asynchronous serial port receive signal	I 3.3 V	PU 47.5 K Ω 3.3 V	
UART1_RTS#	B89	Logic level asynchronous serial port Request to Send signal, active low	O 3.3 V

I2C0_ALERT#	C95	Alert input / interrupt for I2C0	I 3.3 VSB	PU 4.75 K Ω 3.3 VSB	
I2C1_CLK	C96	Clock I/O line for the general purpose I2C1 port	I/O OD 1.8 VSB	PU 4.75 K Ω 1.8 VSB	Not 3.3 VSB!
I2C1_DAT	C97	Data I/O line for the general purpose I2C1 port	I/O OD 1.8 VSB	PU 4.75 K Ω 1.8 VSB	Not 3.3 VSB!

Table 33 IPMB Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
IPMB_CLK	B91	Clock I/O line for the multi-master IPMB port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	
IPMB_DAT	B92	Data I/O line for the multi-master IPMB port	I/O OD 3.3 VSB	PU 4.75 K Ω 3.3 VSB	

Table 34 General Purpose SPI Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
GP_SPI_MISO	B94	Serial data into the COM-HPC Module from the Carrier GP_SPI device ("Master In Slave Out")	I 3.3 V	PU 10 K Ω 3.3 V	
GP_SPI_MOSI ¹	B93	Serial data from the COM-HPC Module to the Carrier GP_SPI device ("Master Out Slave In")	O 3.3 V		May be a boot strap signal depending on assembly option (see note below)
GP_SPI_CLK	B99	Clock from the Module to Carrier GP_SPI device	O 3.3 V		
GP_SPI_CS0#	B95	GP_SPI chip selects, active low	O 3.3 V	PU 10 K Ω 3.3 V	
GP_SPI_CS1#	B96			PU 10 K Ω 3.3 V	
GP_SPI_CS2#	B97			PU 10 K Ω 3.3 V	Not supported
GP_SPI_CS3#	B98			PU 10 K Ω 3.3 V	Not supported
GP_SPI_ALERT#	B100	Alert (interrupt) from a Carrier GP_SPI device to the Module	I 3.3 V	PU 10 K Ω 3.3 V Ω	

¹. Optionally, this signal can be provided by the SoC instead of the cBC and then has a special functionality during the reset process (assembly option). It may strap some basic important function of the module. For more information refer to section 9.2 "Boot Strap Signals".

Table 35 Power and System Management Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
PWRBTN#	B02	A falling edge creates a power button event. Power button events can be used to bring a system out of S5 soft off and other suspend states, as well as powering the system down (with a sustained low).	I 3.3 VSB	PU 100 K Ω 3.3 VSB	
RSTBTN#	C02	Reset button input. The RSTBTN# may be level sensitive (active low) or may be triggered by the falling edge of the signal. The Module PLTRST# signal (below) should not be released (driven or pulled high) while the RSTBTN# is low. For situations when RSTBTN# is not able to reestablish control of the system, VIN_PWR_OK or a power cycle may be used.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	

PLTRST#	A12	Platform Reset: output from Module to Carrier Board. Active low. Issued by Module chipset and may result from a low RSTBTN# input, a low VIN_PWR_OK input, a VCC power input that falls below the minimum specification, a watchdog timeout, or may be initiated by the Module software. PLTRST# should remain asserted (low) while the RSTBTN# is low.	O 3.3 VSB	PD 100 K Ω	
VIN_PWR_OK	C06	Power OK from main power supply. A high value indicates that the power is good.	I 3.3 V	PU 100 K Ω 3.3 VSB	
SUS_S3#	B08	Indicates system is in Suspend to RAM state. Active low output. An inverted copy of SUS_S3# on the Carrier Board should be used to enable the non-standby power on a typical ATX supply. Even in single input supply system implementations (AT mode, no standby input), the SUS_S3# Module output should be used to disable any Carrier voltage regulators when SUS_S3# is low, to prevent bleed leakage from Carrier circuits into the Module.	O 3.3 VSB	PD 100 K Ω	
SUS_S4_S5#	C08	Indicates system is in Suspend to Disk (S4) or Soft Off (S5) state. Active low output.	O 3.3 VSB	PD 100 K Ω	
SUS_CLK	A87	32.768 kHz +/- 100 ppm clock used by Carrier peripherals such as M.2 cards in their low power modes.	O 3.3 VSB		
WAKE0#	D10	PCI Express wake up signal.	I/O 3.3 VSB	PU 4.7 K Ω 3.3 VSB	
WAKE1#	D11	General purpose wake up signal. May be used to implement wake- up on PS2 keyboard or mouse activity.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
BATLOW#	A11	Indicates that external battery is low. This port provides a battery-low signal to the Module for orderly transitioning to power saving or power cut-off ACPI modes.	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
LID#	B45	LID switch. Low active signal used by the ACPI operating system for a LID switch.	I 3.3 VSB	PU 47.5 K Ω 3.3 VSB	
SLEEP#	B46	Sleep button. Low active signal used by the ACPI operating system to bring the system to sleep state or to wake it up again.	I 3.3 VSB	PU 100 K Ω 3.3 VSB	
TAMPER#	B06	Tamper or Intrusion detection line on VCC_RTC power well. Carrier hardware pulls this low on a Tamper event.	I 3.3 VSB	PU 1 M Ω 3.3 VSB	
AC_PRESENT	D34	Driven hard low on Carrier if system AC power is not present	I 3.3 VSB	PU 10 K Ω 3.3 VSB	
RSMRST_OUT#	B86	This is a buffered copy of the internal Module RSMRST# (Resume Reset, active low) signal. The internal Module RSMRST# signal is an input to the chipset or SOC and when it transitions from low to high it indicates that the suspend well power rails are stable. USB devices on the Carrier that are to be active in S5 / S3 / S0 should not have their 5V supply applied before RSMRST_OUT# goes high. RSMRST_OUT# shall be a 3.3V CMOS Module output, active in all power states.	O 3.3 VSB	PD 100 K Ω	

Table 36 Rapid Shutdown Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
RAPID_SHUTDOWN	E01	Trigger for Rapid Shutdown. Must be driven to 5 V though a $\leq 50 \Omega$ source impedance for $\geq 20 \mu\text{s}$. Pull-down / disable on Module if RAPID_SHUTDOWN pin is not asserted.	I 5 VSB	PD 100 K Ω	Not supported

Table 37 Thermal Protection Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
CARRIER_HOT#	C04	Input from off-Module temp sensor indicating an over-temp situation.	I 3.3 V	PU 10 K Ω 3.3 V	
THERMTRIP#	B04	Active low output indicating that the CPU has entered thermal shutdown.	O 3.3 V	PD 100 K Ω	

Table 38 SMBus Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
SMB_CLK	C86	System Management Bus bidirectional clock line.	I/O OD 3.3 VSB	PU 2.2 K Ω 3.3 VSB	
SMB_DAT	C87	System Management Bus bidirectional data line.	I/O OD 3.3 VSB	PU 2.2 K Ω 3.3 VSB	
SMB_ALERT#	C88	System Management Bus Alert – active low input can be used to generate an SMI# (System Management Interrupt) or to wake the system.	I 3.3 VSB	PU 2.2 K Ω 3.3 VSB	

Table 39 General Purpose Input Output Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
GPIO_00	A88	General purpose input / output pins. Upon a hardware reset, these pins should be configured as inputs. As inputs, these pins should be able to generate an interrupt to the Module host.	I/O 3.3 VSB	PU 100 K Ω 3.3 VSB

Table 41 Miscellaneous Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
WD_OUT	B11	Output indicating that a watchdog time-out event has occurred. Refer to the COM-HPC® Module Base Specification for details.	O 3.3 V	PD 100 KΩ	
WD_STROBE#	B10	Strobe input to watchdog timer. Periodic strobing prevents the watchdog, if enabled, from timing out.	I 3.3 V	PU 10 KΩ 3.3 V	
FAN_PWMOUT	C11	Fan speed control. Uses the Pulse Width Modulation (PWM) technique to control the fan's RPM.	O OD 3.3 V		
FAN_TACHIN	C12	Fan tachometer input for a fan with a two pulse output.	I OD 3.3 V	PU 47.5 KΩ 3.3 V	
TEST#	B85	Module input to allow vendor specific Module test mode(s). Carrier designers should leave this pin open on the Carrier. Designers involved in the design of specialty Carriers for Module test may pull this line to GND or possibly to a Module specific analog voltage between GND and 3.3 V to select a test mode.	I OD 3.3 VSB	PU 10 KΩ 3.3 VSB	

RSVD	D35	Reserved pins. These may be assigned functions in future versions of this specification. Reserved pins shall not be connected to anything, and shall not be connected to each other.			Not connected
	E69-E77				
	E84-E85				
	F12-F18				
	F68-F69

Table 42 External Power Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
VCC	A01-A09	Primary power input: fixed +12 V on the Client Type 0; wide range +8 V to +20 V on the Client Type 1; fixed +12 V on the Server. All available VCC pins on the connector shall be used. Refer to COM-HPC® Module Base Specification for details.			
	B01, B03, B05, B07, B09				
	C01, C03, C05, C07, C09				
	D01-D09				
VCC_5V_SBY	B24	Standby power input: +5.0 V nominal. Only used for standby and suspend functions. May be left unconnected if these functions are not used in the system design. Refer to COM-HPC® Module Base Specification for details.			
	G01				
VCC_RTC	A86	Real-time clock circuit-power input. Nominally +3.0 V. Refer to COM-HPC® Module Base Specification for details.			

Table 43 Functional Safety (FuSa) Support Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
FUSA_STATUS0	F01	Two bit FuSa status / error indication outputs to Carrier based Safety Controller hardware 00 - power off	O CMOS 3.3 V	PU 10 K Ω 3.3 V	
FUSA_STATUS1	F02	01 - no error (OK state) 10 - error state (NOK state) 11 - reset state	O CMOS 3.3 V	PD 0R Ω	
FUSA_ALERT#	F03	Active low output from the COM-HPC Module that signals the occurrence of a correctable error on the COM-HPC Module; the carrier FuSa Safety Controller should query the status via the FuSa SPI interface	O CMOS 3.3 V		Not connected
FUSA_SPI_CS#	F04	Active low chip select into the COM-HPC Module from the Carrier FuSa Safety Controller SPI Master	I CMOS 3.3 V	PU 10 K Ω 3.3 V	
FUSA_SPI_CLK	F05	Clock into the COM-HPC Module from the Carrier FuSa Safety Controller SPI Master	I CMOS 3.3 V	PU 10 K Ω 3.3 V	
FUSA_SPI_MISO	F06	Serial data into the Carrier FuSa SPI Master from the COM-HPC Module SPI Slave ("Master In Slave Out")	O CMOS 3.3 V		Not connected
FUSA_SPI_MOSI	F07	Serial data from the Carrier FuSa SPI Master, into the COM-HPC Module SPI Slave ("Master Out Slave In")	I CMOS 3.3 V	PU 10 K Ω 3.3 V	
FUSA_SPI_ALERT	F08	Active high alert output from the COM-HPC Module to alert the Carrier FuSa Safety Controller that Module FuSa SPI data is available for transfer	O CMOS 3.3 V		Not connected
FUSA_VOLTAGE_ERR#	F09	Active low output indicating an over- or under voltage or over-current condition of the monitored voltage rails of the FuSa relevant module power supply	O CMOS 3.3 V		Not connected
PROCHOT#	F10	Active low output indicating a temperature excursion event on the COM-HPC Module	O CMOS 3.3 V	PD 100K Ω	
CATERR#	F11	Active low output indicating a catastrophic error on the COM-HPC CPU or SOC	O CMOS 3.3 V	PD 100K Ω	
THERMTRIP#	B04	Active low output indicating that the CPU has entered thermal shutdown	O CMOS 3.3 V	PD 100K Ω	

9.2 Boot Strap Signals

Table 44 Boot Strap Signal Descriptions

Signal	Pin #	Description	I/O	PU/PD	Comment
I2S_DOUT/ SNDW_DAT3/ HDA_SDOOUT	B20	I2S Data Out. This pin is an input in I2S mode Alternative use as bi-directional Soundwire 2 data lane or Serial TDM data output to the codec	I/O 1.8 V		
GP_SPI_MOSI	B93	Serial data from the COM-HPC Module to the Carrier GP_SPI device ("Master Out Slave In")	O 3.3 V		Not a boot strap signal by default. Boot strap signal in case of assembly option. See section 6.14 "General Purpose SPI Port" for more information.
BOOT_SPI_IO0	C50	Bidirectional 4 bit data path out of and into a Carrier SPI flash operating in Serial Quad Interface (SQI) mode.	I/O VCC_BOOT_SPI	PU 4.75 K Ω 3.3 VSB	
BOOT_SPI_IO2	C52	Bidirectional 4 bit data path out of and into a Carrier SPI flash operating in Serial Quad Interface (SQI) mode.	I/O VCC_BOOT_SPI	PU 100 K Ω 3.3 VSB	
BOOT_SPI_IO3	C53	Bidirectional 4 bit data path out of and into a Carrier SPI flash operating in Serial Quad Interface (SQI) mode.	I/O VCC_BOOT_SPI	PU 100 K Ω 3.3 VSB	

Note

The signals listed in the table above are used as chipset configuration straps during system reset. In this condition (during reset), the COM-HPC® or chipset internally implemented resistors pull these signals to the correct state.

Caution

No external DC loads or external pull-up or pull-down resistors should change the configuration of the signals listed in the above table. External resistors may override the internal strap states and cause the COM-HPC® module to malfunction and/or cause irreparable damage to the module.

10 System Resources

10.1 I/O Address Assignment

The I/O address assignment of the conga-HPC/cRLS module is functionally identical with a standard PC/AT.

The BIOS assigns PCI and PCI Express I/O resources from FFF0h downwards. Non PnP/PCI/PCI Express compliant devices must not consume I/O resources in that area.

10.1.1 eSPI Bus

On the conga-HPC/cRLS, the PCI Express Bus acts as the subtractive decoding agent. All I/O cycles that are not positively decoded are forwarded to the PCI Express Bus—not the eSPI Bus. Only specified I/O ranges are forwarded to the eSPI Bus. The eSPI Bus from the chipset is connected to COM-HPC® connector and supports two chipselects (CS0, CS1). CS0 is connected to the embedded board controller for exclusive use. In the congatec Embedded BIOS, the following I/O address ranges are sent to the eSPI Bus CS0:

E00h - EFFh (always used internally by the congatec board controller)

eSPI CS1 does not support external devices by default. Optionally, support can be enabled (Custom BIOS option).

10.2 PCI Configuration Space Map

Bus Number (hex)	Device Number (hex)	Function Number (hex)	Description
00h	00h	00h	HOST and DRAM Controller
00h	01h	00h	PEG10/11
00h	02h	00h	Integrated Graphics Device
00h	06h	00h	PEG60
00h	14h	00h	USB3 xHCI Host Controller
00h	14h	02h	Shared SRAM Controller
00h	15h	00h	I2C Controller
00h ¹	16h	00h	Management Engine (ME) Interface 1
00h	17h	00h	SATA Controller
00h ²	1Ah	00h	PCI Express Root Port 25
00h ²	1Ah	02h	PCI Express Root Port 27
00h ²	1Bh	00h	PCI Express Root Port 21
00h ²	1Ch	00h	PCI Express Root Port 1

00h ²	1Ch	01h	PCI Express Root Port 2
00h ²	1Ch	02h	PCI Express Root Port 3
00h ²	1Ch	03h	PCI Express Root Port 4
00h ²	1Ch	04h	PCI Express Root Port 5
00h ²	1Dh	00h	PCI Express Root Port 9
00h	1Dh	04h	PCI Express Root Port 13 – GBE 1
00h	1Dh	05h	PCI Express Root Port 14 – GBE 0
00h ²	1Dh	06h	PCI Express Root Port 15
00h ²	1Dh	07h	PCI Express Root Port 16
00h	1Fh	00h	PCI to eSPI Bridge
00h	1Fh	03h	Intel® High Definition Audio
00h	1Fh	04h	SMBus Controller
00h	1Fh	05h	SPI Flash Controller
01h ³	00h	00h	PCIe Device connected to PEG Root Port PCIE16
02h ³	00h	00h	PCIe Device connected to PEG Root Port PCIE4
03h ³	00h	00h	PCIe Device inserted in PCI Express Port 25 x2
04h ³	00h	00h	PCIe Device inserted in PCI Express Port 27 x2
05h ³	00h	00h	PCIe Device inserted in PCI Express Port 21 x4
06h ³	00h	00h	PCIe Device inserted in PCI Express Port 1 x1
07h ³	00h	00h	PCIe Device inserted in PCI Express Port 2 x1
08h ³	00h	00h	PCIe Device inserted in PCI Express Port 3 x1
09h ³	00h	00h	PCIe Device inserted in PCI Express Port 4 x1
0Ah ³	00h	00h	PCIe Device inserted in PCI Express Port 5 x4
0Bh ³	00h	00h	PCIe Device inserted in PCI Express Port 9 x4
0Ch ³	00h	00h	Intel Ethernet controller I226 GBE 1
0Dh ³	00h	00h	Intel Ethernet controller I226 GBE 0

- Note**
1. In the standard configuration, the Intel Management Engine (ME) related devices are partly present or not present at all.
 2. The PCI Express Ports are visible only if a device is attached to the PCI Express Slot on the carrier board.
 3. The Table represents a case when a Single function PCI/PCIe device is connected to all possible slots on the carrier board. The given bus numbers will change based on actual hardware configuration.
 4. Internal PCI devices not connected to the conga-HPC/cRLS are not listed.

10.3 I²C

The addresses below are reserved for Battery Management solutions. Onboard resources are not connected to the I²C busses.

Table 45 Reserved I2C Bus Addresses

8-bit Device Address	7-bit Device Address	Device	Description
0x14	0x0A	congatec Board Controller	Reserved for battery management
0x16	0x0B	congatec Board Controller	Reserved for battery management

10.4 SMBus

The addresses below are reserved on the SMBus of the conga-HPC/cRLS. The SMBus signals are connected to the Intel® chipset.

Table 46 Reserved SMBus Addresses

8-bit Device Address	7-bit Device Address	Device	Comment
0xA0	0x50	Memory SPD	Reserved only if SM BUS isolation is not set to "Always" Check further devices on DDR5 memory.
0xA2	0x51		
0xA4	0x52		
0xA6	0x53		
0x14	0x0A	congatec Board Controller	Reserved for battery management
0x16	0x0B	congatec Board Controller	Reserved for battery management

Note

Do not use the SMBus for off-board non-system management devices. For more information, contact congatec technical support.

10.5 USB PD Bus

The addresses below are reserved on the USB Power Delivery Bus (USB PD Bus) of the conga-HPC/cRLS.

Table 47 Reserved USB PD Bus Addresses

8-bit Device Address	7-bit Device Address	Device	Description
0x40	0x20	Carrier board Post Code Display	Reserved for carrier board Post Code Display
0x42	0x21		

11 BIOS Setup Description

The BIOS setup description of the conga-HPC/cRLS can be viewed without having access to the module. However, access to the restricted area of the congatec website is required in order to download the necessary tool (CgMlfViewer) and Menu Layout File (MLF).

The MLF contains the BIOS setup description of a particular BIOS revision. The MLF can be viewed with the CgMlfViewer tool. This tool offers a search function to quickly check for supported BIOS features. It also shows where each feature can be found in the BIOS setup menu.

For more information, read the application note "AN42 - BIOS Setup Description" available at www.congatec.com.

Note

If you do not have access to the restricted area of the congatec website, contact your local congatec sales representative.

11.1 Navigating the BIOS Setup Menu

The BIOS setup menu shows the features and options supported in the congatec BIOS. To access and navigate the BIOS setup menu, press the or <F2> key during POST. The right frame displays the key legend. Above the key legend is an area reserved for text messages. These text messages explain the options and the possible impacts when changing the selected option in the left frame.

11.2 BIOS Versions

The BIOS displays the BIOS project name and the revision code during POST, and on the main setup screen. The initial production BIOS for conga-HPC/cRLS is identified as GQRSR1xx, where:

- R is the identifier for a BIOS ROM file,
- 1 is the so called feature number and
- xx is the major and minor revision number.

The binary size is 32 MB.

11.3 Updating the BIOS

BIOS updates are recommended to correct platform issues or enhance the feature set of the module. The conga-HPC/cRLS features a congatec/AMI AptioEFI firmware on an onboard flash ROM chip. You can update the firmware with the congatec System Utility. The utility has five versions—UEFI shell, DOS based command line¹, Win32 command line, Win32 GUI, and Linux version.

For more information about “Updating the BIOS” refer to the user’s guide for the congatec System Utility “CGUTLm1x.pdf” on the congatec website at www.congatec.com.

Note

¹. *Deprecated*

Caution

The DOS command line tool is not officially supported by congatec and therefore not recommended for critical tasks such as firmware updates. We recommend to use only the UEFI shell for critical updates.

11.3.1 Update from External Flash

For instructions on how to update the BIOS from external flash, refer to the AN7_External_BIOS_Update.pdf application note on the congatec website at www.congatec.com.

11.4 Supported Flash Devices

The conga-HPC/cRLS supports the following flash devices:

- Winbond W25R256JVEIQ (32 MB)
- Winbond W25R256JVEIN (32 MB)

The flash devices can be used on the carrier board to support external BIOS. For more information about external BIOS support, refer to the Application Note “AN7_External_BIOS_Update.pdf” on the congatec website at www.congatec.com.
